This reference grammar is intended for adult speakers of English who are at the elementary through the intermediate levels of acquisition of the Slovene language. It begins with a brief description of the Slovene language, its major dialects and its place among the Slavic languages. Information on the alphabet, pronunciation, and spelling rules follows. The major part of the work treats the major categories of speech: nouns, adjectives, pronouns, numeral declensions, and verbal conjugations. There are brief sections treating prepositions, adverbs, information on syntactic constructions relevant to the early stages of Slovene language study, and word order and word formation. Word and subject indexes and a bibliography are included. (Contains 30 references.) (Author)

FOREWORD

The reference grammar which follows was written for speakers of English who are at the elementary through the intermediate levels of acquisition of the Slovene language. It attempts to present in a logical and easily comprehensible way the basic grammar of Slovene, beginning with a brief description of the Slovene language, its major dialects and its place among the Slavic languages. Then follows information on the alphabet, pronunciation and spelling rules. The major part of the work treats systematically and in a simplified form the major categories of speech: nouns, adjectives, pronouns, numeral declensions and verbal conjugations. Finally, there are brief sections treating prepositions, adverbs, information on a number of syntactic constructions relevant to the early stages of Slovene language study, word order and word formation.

The need for a work such as this one grew out of the author's own experience in studying Slovene. While there exist a number of grammars of the language for beginners, the majority of them published in Ljubljana, for the most part they neither present Slovene grammar in a systematic way, nor do they contain comprehensive charts of that language's grammar for easy reference in an appendix format. Furthermore, with few exceptions, available grammars are written exclusively in Slovene, requiring the learner to construct the grammar of Slovene as he or she progresses. It is the author's belief that employing the inductive method in the study of a Slavic language in most instances is not the most efficient path towards mastery. The latter is particularly true when applied to Slovene, which contains grammatical structures both more complex than many other Slavic languages (Russian, for example) and at the same time very different from languages such as English, Spanish or even German. The entire process can be accelerated and made more convenient with access to charts, lists and explanations
at one's fingertips.

In writing this text the author was guided and aided by extremely helpful hints from colleagues and was provided with examples by a number of native speakers of Slovene. He reminds the learner, however, that Slovene is a language which contains numerous allowable variant forms. A reference work of this scope cannot present every possible form and serves at best as a guide to the grammar as described by native linguists and grammarians. In those instances when the native informants did not agree on the correctness of a grammatical or lexical item, the author used as his final arbiter major comprehensive dictionaries and grammars published in Slovenia. The student is likewise advised to verify forms with a native speaker and to consult similar works should doubts arise when encountering an unexpected form.

This work constitutes a basic reference grammar of Slovene and has been written for use with any of the several existing grammars of Slovene*. The intended audience is an adult one possessing a command of the English language and a grasp of basic grammatical terminology as needed for the study of a Slavic language such as Slovene. Potential users may be university students, researchers in the Humanities, Social Sciences or Natural Sciences or those persons of Slovene descent who wish to improve their command of their ancestral tongue. Since this work describes the grammatical structure of the Slovene language, the author reminds the user that oral proficiency will be gained only through systematic work with speakers of Slovene.

This work would not have been possible without the continuous support and encouragement of Rado L. Lencek of Columbia University, a true humanist, scholar and respected colleague. Prof. Lencek's dedication to his native Slovene language as well as to the fate of the other

* See bibliography at the end of the book.
"minor" Slavic languages has resulted, inter alia, in several roundtable discussions and scholarly panels sponsored by his university, the Society for Slovene Studies and the American Association for the Advancement of Slavic Studies and has served as the primary impetus for this author to codify the Slovene language in the form of a basic reference grammar.

Others who have shown a deep interest in, offered illustrative examples for and provided invaluable comments on this work include Marija Bolta, Henry R. Cooper, Jr., Ljuba Črnivec, Marc Greenberg, Irma Ožbalt and Joseph Paternost. To each of them I am deeply indebted.

The author wishes to express his sincere gratitude to the following agencies whose support enabled the completion of this work: The Department of Higher Education of the State of New Jersey, The Rutgers Research Council and The U.S. Department of Higher Education. Last, but not least, hearty thanks go to Dagmar Jensen who so patiently typed early drafts of the manuscript and to Mikhail Sakgobenzon and Bengt Erikson who provided gracious and much needed proofreadings of the manuscript and to the latter who drew the map on p. 13. The remaining and inevitable errors are the sole responsibility of the author who begs the reader's indulgence!

William W. Derbyshire
Somerset, NJ, and Seattle, WA, 1992
THE SLOVENE LANGUAGE

Modern Slovene is the official language of the Republic of Slovenia. The capital and largest city of Slovenia is Ljubljana, and its second largest city is Maribor. There are approximately two million speakers of Slovene in Slovenia, and large numbers of speakers of the language live in Slovene ethnic enclaves in neighboring Austria, Hungary and Italy. Many speakers of the language and persons of Slovene descent live throughout the world, including the English speaking world.

The language presented in grammars and taught in schools and universities is known as Contemporary Standard Slovene. It is the language of educated Slovenes and is used in all forms of artistic endeavor and in the mass media in Slovenia. Its speech area extends from the Julian Alps to the Croatian border not far from Zagreb and from the Hungarian border to the Italian littoral area. Slovene consists of many dialects with the major bases located in the following regions: Lower Carniola (Dolenjsko), Upper Carniola (Gorenjsko), Styria (Štajersko), the Pannonian region on the Hungarian border (Panonsko), Carinthia (Koroško), the Littoral along the Adriatic coast and the Italian-Friulian border (Primorsko) and the Rovte area (Rovtarsko) between the Littoral and Upper Carniola. The standard language is a composite of the dialects of the several regions of Slovene linguistic territory, but it is based primarily on the geographically central dialects of Dolenjsko and Gorenjsko.

Slovene is a member of the Slavic branch of the Indo-European family of languages. More specifically, it belongs to the South Slavic group of languages and is closely related to Serbo-Croatian and shares close affinities with the other South Slavic languages, Bulgarian and Macedonian. Additional sister Slavic languages include Russian, Ukrainian and Belorussian to the east and Polish, Czech, Slovak and Lusatian
to the northwest. As a member of the large family of Indo-European group of languages, it is related to English and German, as well as to the Romance languages (French, Spanish, Italian, et al.) and to many other languages which extend from India to the British Isles and now to the New World.

The map which follows is based on commonly accepted descriptions and shows a Slovene linguistic territory which extends into Italy and Austria to the west and north, Hungary to the east and Croatia to the south.

1. Lower Carniola (Dolenjsko)
2. Upper Carniola (Gorenjsko)
3. Styria (Štajersko)
4. Pannonia (Panonsko)
5. Carinthia (Koroško)
6. Rovte (Rovtarsko)
7. Littoral (Primorsko)
**THE ALPHABET, SOUNDS AND SPELLING RULES**

Slovene uses the Latin alphabet and employs 25 letters, three of which are used in combination with the diacritical mark Š. Presented below are the letters with the sound value for each.

<table>
<thead>
<tr>
<th>Letter</th>
<th>Approximate sound value</th>

</tbody>
</table>

The following letters appear in foreign words:
- Q q (listed after P in dictionaries)
- W w (listed after V in dictionaries)
- X x (listed after W in dictionaries)
- Y y (listed after X in dictionaries)
The Alphabet, Sounds and Spelling Rules

Letters above which represent consonant sounds in Slovene are:

\[ b, c, č, d, f, g, h, j, k, l, m, n, p, r, s, š, t, v, z, ž \]

Letters above which represent vowel sounds in Slovene are:

\[ a, e, i, o, u \]

NOTES ON THE CONSONANT SOUNDS L, R AND V:

1. The letter l represents two basic sounds:
   (a) Before vowels and the consonant j, l is similar to the l in the word lumber, e.g. līst 'leaf' and ljudje 'people'.
   (b) Before all other consonants and at the end of words, l is normally pronounced as w in way or now, e.g. vółk [vówk] 'wolf' and cél [céw] 'whole'.
   There are a number of exceptions to (b) above which must be learned individually. They include certain literary words as well as some foreign borrowings, e.g. the words glágol 'verb', kultúra 'culture' and names such as Ciríl and Báltimore in which l retains the pronunciation noted in (a) above.

2. The letter r represents a rolled sound made by vibrating the tip of the tongue near the back of the upper tooth ridge. A similar sound does not exist in most varieties of English, but it is found in languages such as Spanish, Italian or Russian. When r occurs at the beginning of a word before another consonant or between two consonants it is pronounced with the vowel [a] preceding it (see note on the vowel e below), for example in the words rdèč [ěrděč] and vět [věrt].

3. The letter v, like l, represents two basic sounds:
   (a) Before vowels it is pronounced like v as in very, e.g. víno 'wine' and povědati 'to tell'.

17
The Alphabet, Sounds and Spelling Rules

(b) At the end of words and before consonants, it is normally pronounced as w, e.g. práv [práv] 'just' / 'quite' and pévka [péwka] '(female) singer'. Again, like 1, there are some exceptions to (b) above which must be learned individually.

NOTES ON VOWELS

Stressed vowels in Slovene may be short or long, while unstressed vowels are short. In two instances the long vowels may be open or closed. It is not possible to find exact English equivalents for all the various vowel sounds in Slovene, and the comments which follow provide only a broad indication of their sound value. When learning Slovene, the student should imitate carefully the pronunciation of vowels by native speakers and avoid any tendency to diphthongize them.

[Note: the use of accent marks already appears in examples above, and a description of them follows in the section below entitled "accent marks".]

Long and short a/i/u: The preceding vowels may be short or long when stressed and, as noted, short when unstressed.

<table>
<thead>
<tr>
<th>Short</th>
<th>Long</th>
</tr>
</thead>
<tbody>
<tr>
<td>a as in father</td>
<td>brát 'brother'</td>
</tr>
<tr>
<td>i as in beet</td>
<td>sít 'full'</td>
</tr>
<tr>
<td>u as in moon</td>
<td>krúh 'bread'</td>
</tr>
</tbody>
</table>

máti 'mother'  sín 'son'  múha 'fly'

e/o: These two vowels may also be short or long when stressed. Further, when long, they may be open or closed. Without the stress they are both short and open. Each is discussed separately below.

Long open o: Its pronunciation lies approximately between the a in all and the o in mode as in the word vőda 'water'.

18
The Alphabet, Sounds and Spelling Rules

Long closed o: Its pronunciation lies approximately between the o in mode and the oo in mood as in the word nós 'nose'.

Short o: Its pronunciation is similar to the a in the word all as in the word otròk 'child'.

Long open e: Its pronunciation lies approximately between the e in bet and the a in bat, but longer in duration, as in the word tèle 'calf'.

Long closed e: Its pronunciation lies approximately between the e in let and the a of late, but longer in duration, as in the word léto 'summer'.

Short e: Its pronunciation is similar to the e in bet as in the word èn 'one'.

The vowel [æ]: The letter e may also represent a short vowel with a pronunciation similar to the a in the word above. In dictionaries and grammars the symbol a is often used to indicate when e is pronounced as [æ], but in standard texts it is normally spelled e. It may occur under stress as in the word pèš [pæš] 'dog'. Unstressed it is found frequently in the final syllable of words, e.g. in the word vèter [vètér] 'wind'.

Those instances when e is pronounced as [æ] are not dealt with in detail in this text, although a number of examples are drawn to the reader's attention. The learner will come to predict its occurrence with some confidence over time. (See also the note on r above.)

[Note: The learner may hear in the pronunciation of some educated native speakers of Slovene the vowel i instead of e before the consonant r, e.g. cérkev [církəw] and Prežéren [prežiɾən].

For those learners whose primary goal is to achieve a reading knowledge of Slovene, vowel
quality (" vs. ") and quantity (" vs. ") — see the section entitled "accent marks" below — will not be a major concern. For the learner wishing to acquire a knowledge of the spoken language, particular attention must be paid from the very beginning to the pronunciation of one's instructor, recordings or native speakers. Failure to distinguish between short and long vowels or between open and closed o and e, for example, can easily lead to misunderstandings. Notice the difference in the meanings in the pairs of words which follow:

kônj (short o) nominative sing. 'horse'
kônj (long o) genitive plural 'horse'

pêti (long closed e) infinitive 'to sing'
pêti (long open e) numeral 'fifth'
nôsi (long closed o) '(he/she) carries'
nôsi (long open o) imperative 'carry!'

**ACCENT MARKS**

As noted above, grammars and dictionaries of Slovene employ the following diacritical marks over vowel letters: " and " to designate quantity (short vs. long) and quality (open vs. closed). The mark ' (acute accent) is used to designate the long stressed vowels a, e, i, o and u, while the mark (grave accent) is used to designate the short stressed vowels a, e, i, o and u. The mark ^ (circumflex) indicates that the quality of long stressed e or o is open, as opposed to the closed quality of a long stressed e or o (marked by '). Thus, all vowels in Slovene may be short or long, with the exception of a, normally written as e, which is always short. Accent marks are not used in standard texts. They will, however, be used throughout this work in order to increase the learner's awareness both of the place of stress and of vowel quality and quantity.
PLACE OF STRESS

Slovene has free stress, i.e. it may fall on any syllable of a word. Furthermore, once established, the place of stress may be non-mobile, i.e. it remains on the same vowel in all forms of those words which change endings by form, or it may be mobile, i.e. it moves between different forms within a word. The latter case, however, occurs with less frequency, since there is a tendency for stress to be non-mobile in Slovene. It is common in linguistic descriptions of Slovene to designate a non-mobile stress which falls on the root of a word and remains there in all forms, e.g. in nouns and verbs, as an A stress pattern. An example is the noun léto 'summer' (see p. 26). Words in which the stress is non-mobile and falls on the ending in all forms, e.g. the present tense of the verb govoriti 'to speak', are said to have a B stress pattern. Words in which the stress is mobile, i.e. moves ahead or back in specific and predictable forms, as in the noun srcè 'heart' (see p. 26) are said to have a C stress pattern.

Likewise the quality of a vowel may alternate between open and closed in different forms of the same word, e.g. in the noun most 'bridge' (see p. 26).

[Hint: Not every word in Slovene receives stress, e.g. prepositions, auxiliary verbs and short forms of pronouns do not. It will help the learner to remember that in accented words which have a long vowel (' or ^), that vowel automatically receives the stress. In an accented word without a long vowel, the stress is short (``) and normally falls on the final syllable.]

PAIRS OF VOICED AND VOICELESS CONSONANTS

Consonants in Slovene are considered to be voiced or voiceless. Some of them, those listed below, form pairs and undergo assimilation, i.e. they change their character under
specific conditions, a fact not reflected in spelling. In such pairs the presence of a paired voiceless consonant immediately before a paired voiced consonant requires its voicing. Paired voiced consonants which occur before paired voiceless consonants or at the end of a word are pronounced like their voiceless counterparts:

<table>
<thead>
<tr>
<th>Voiced</th>
<th>Voiceless</th>

<td>težkó [težkó] 'difficult'</td>
</tr>
<tr>
<td>ž &gt; z</td>
<td>važ déd [važ déd] 'your grandfather'</td>
</tr>
</tbody>
</table>

CONSONANT ALTERNATIONS

In certain inflectional and derivational categories of Slovene a series of consonant alternations will occur automatically. This will be seen in the former, for example, in certain verb forms, specific case forms of nouns, the formation of comparative adjectives and in the
The Alphabet, Sounds and Spelling Rules

latter in the area of word formation. The most common alternations are:

| k, t and c | č |
| g, z and zd | ž |
| h and s | š |
| sk and st | šč |
| d | j |
| r | rj |
| l | lj |
| n | nj |

SOME EXAMPLES:

okó 'eye' očí 'eyes'
krátek 'short' kráčina 'shortness'
drág 'expensive' drážji 'more expensive'
rézati 'to cut' réži 'cut!'
tíh 'quiet' tíšji 'quieter'
písáti 'to write' píšem 'I write'
iskáti 'to seek' íščem 'I seek'
prepnutíti 'to yield' prepnutý 'yielded'
mlád 'young' mláďši 'younger'
oralá 'to plow' órjem 'I plow'
dáleč 'far' dálje 'farther'
tánek 'thin' táníšť 'thinner'

NOTES ON CONSONANT ALTERNATIONS

1. The consonant alternations below are less frequently encountered. They are used primarily in the conjugation of a limited number of verbs, in creating certain types of imperfective verbs (see p. 93 for examples) and in forming past passive participles (p. 87).

sl~ šlj posláti ~ půšljem
'to send' ~ 'I send'

p ~ plj kápati ~ káplje
'to drip' ~ 'it drips'

b ~ blj ljubiti ~ ljúbbljen
'to love' ~ 'loved'

v ~ vlj slaviti ~ slávbljen
'to glorify' ~ 'glorified'

m ~ mlj dremáti ~ drémbljem
'to doze' ~ 'I doze'
2. In verbs whose infinitive ends in -či the root contains a -k or -g, and these alternate respectively with -c and -z in the imperative form only:

<table>
<thead>
<tr>
<th>Infinitive</th>
<th>'to say'</th>
<th>'to lie down'</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st person sing.</td>
<td>rēči</td>
<td>léči</td>
</tr>
<tr>
<td>Participle in -l</td>
<td>rékel</td>
<td>légel</td>
</tr>
<tr>
<td>Imperative</td>
<td>rēci(te)</td>
<td>lézi(te)</td>
</tr>
</tbody>
</table>

3. The r ~ rř alternation is limited and less predictable and occurs in certain forms of nouns, adjectives and verbs. For examples see p. 29.

SPECIAL NOTE ON THE ALTERNATION OF O WITH E

In masculine and neuter noun declensions (for example, in the instrumental singular, the dative plural and genitive plural) and in adjective declensions (see p. 39) an expected o after the consonants č, š, ž, c and j, which are considered soft consonants in Slovene, is spelled and pronounced as -e.

Compare: z ávtom 'by car'
          z ēnim udárcem 'with one strike'
          and
          bélo víno  'white wine'
          rděče víno 'red wine'

24
THE GRAMMAR OF SLOVENE

Slovene is a language in which nouns, pronouns, adjectives and numerals are declined, i.e. they change form by case. Verbs are conjugated, i.e. they change form by person and number, and they also denote tense (e.g. present, past, future). Words which do not change form by case include adverbs, conjunctions, particles, interjections and prepositions, the last of which, however, determine case selection for declined words.

The descriptions which follow will serve as a basic reference for nouns, adjectives, pronouns, numerals, verbs, adverbs and prepositions. The information presented in this text should be sufficient to guide persons undertaking a study of Slovene through the elementary and intermediate levels of that language. A number of exceptions are included in this description, i.e. irregularities likely to be encountered at the elementary and intermediate levels of Slovene language study. This reference material does not claim to be complete or exhaustive, but every effort has been made to include those exceptional forms needed realistically at the early stages of Slovene language study.

Nouns in Slovene are characterized by gender, case and number. There are three genders: masculine, feminine and neuter. Further, nouns are declined, i.e. their form changes by case through the addition of sets of endings the choice of which depends on the function of the noun within a given sentence. There are six cases: nominative, accusative, genitive, dative, locative, and instrumental. The numbers are singular, dual and plural.

GENDER

In the nominative case, the dictionary entry form, most masculine nouns end in a con-
sonant. Feminine nouns end in -a or, in some cases, in a consonant. Neuter nouns end in -o or -e. The case forms (sets of endings) for masculine and neuter nouns are identical in most cases, and they constitute CLASS I for nouns.

Feminine nouns which end in -a, together with a limited number ending in a consonant, form CLASS II. All other feminine nouns ending in a consonant form CLASS III.

There is: a small number of nouns which do not decline.

CASE

As noted above, the selection and use of cases in Slovene is determined by the function of the noun within the sentence:

The NOMINATIVE case is the basic form of the noun, and its primary function is to serve as the subject of a sentence.

The ACCUSATIVE case, inter alia, corresponds to the direct object in English. It is also governed by (i.e. its use is required by the presence of) numerous verbs, and it is used with certain prepositions. In the case of masculine singular nouns only, the choice of endings depends on whether the object being referred to is animate or inanimate. If it is animate, i.e. refers to a person or animal, the ending is identical to the genitive case. The accusative ending for inanimate masculine objects coincides with the nominative case. (See pp. 103-104 for additional information on the topic of animate vs. inanimate.)

The GENITIVE case fulfills a wide variety of functions, one of which is to indicate possession. It is also used after many prepositions, after numerals, and it is governed by certain verbs. (Information on additional uses of the genitive is found on pp. 105-107).

The DATIVE case is the equivalent of the indirect object in English, i.e. a person or object acting as the recipient of the action of specific verbs. It is also used with a number of prepositions.
The LOCATIVE case is used with a number of prepositions which denote certain concepts of location and time.

The INSTRUMENTAL case is used with a number of prepositions which denote certain concepts of space and means and functions.

NUMBER

The SINGULAR number is used when discussing one subject or object.

The DUAL is employed only when referring to two counted subjects or objects. (See pp. 102-103 for additional information on the use of the dual in Slovene.)

The PLURAL is used when referring to more than two subjects or objects.

Note: There is a limited but significant number of nouns in Slovene which occur in the singular or plural only, e.g. zlató 'gold' for the former and vráta 'door' for the latter. Such words often refer to things which are not countable, e.g. zrák 'air'.

ENDINGS

Words which end in a consonant may be said to have a zero ending. (# is a linguistic symbol which is often used to designate a zero ending.) Typically, nouns change form by adding an ending to the root or stem consonant, the final consonant of a word before its ending. Nouns which end in a vowel (-a, -o, or -e) drop that vowel and replace it with the proper ending. Note the final root consonant in the following words: mőst#, lét-o, knjíg-a, stvár#.

Further, the number of different case endings in the singular does not exceed four, since some endings serve for more than one case. In the plural there may be six different endings, and in the dual the nominative and accusative coincide, as do the dative and instrumental. The genitive and locative cases of the dual coincide with the same cases of the plural.

#### Dual

| N/A            | stvarí     | mísli       |
| D/I            | stvaréma   | míslima     |

#### Plural

| N              | stvarí     | mísli       |
| A              | stvarí     | mísli       |
| G              | stvarí     | mísli       |
| D              | stvarém    | míslim      |
| L              | stvaréh    | míslih      |
| I              | stvarmí    | míslimi     |
Note: The presence of alternative forms for a single case indicates that either form is acceptable. Such double forms may differ in place of stress, e.g. in the locative singular of čèrkev, or in the choice of case ending, e.g. the genitive plural of gòra and cèrkev above or the genitive singular mostú/móstá on the preceding page. While either form may be encountered, it is emphasized that the individual speaker will always use one or the other systematically. Throughout this work many such double forms will be presented. In most cases the first form given will be the one more preferred in current standard usage, while the second form may be either more literary, dated, colloquial or dialectal in nature. The declension of the word gòra, for example, indicates the possibility of a non-mobile A stress pattern on the first syllable or a mobile C stress pattern shifting to the ending in several forms. As noted earlier there is a growing tendency in Slovene to prefer a non-mobile stress. Those forms are more common today, so that in this instance gòra stressed on the o of the root throughout is to be preferred.

**MISCELLANEOUS COMMENTS**

1. Many masculine and feminine nouns have a so-called "fleeting" vowel in their stem, i.e. the final vowel letter (-e- or -a-) is dropped throughout the declension: cèrkev ~ cèrkve 'church', dàn ~ dné 'day', pèš ~ psà 'dog', and stárec ~ stárca 'old man', véter ~ vétra 'wind'. Belonging to this group are most nouns ending in -ec, -eg, -ek, -er and -ev in which the vowel -e- is pronounced [a]. (See also note under e on p. 17.)

2. (a) All borrowings, except those which end in -a, are considered to be masculine, i.e. no borrowings become neuter nouns in Slovene. They are declined like Class I nouns, e.g. finále 'finale', kíno 'movies', rádio 'radio', táksi 'taxi'. (See also note 1. (b) below.)
(b) Borrowings which end in -a are feminine and are declined like Class II nouns. (See also note 1 on p. 33) Those borrowings which refer to a female but do not end in -a, however, are not declined, e.g. lady [lé(j)di], madam and proper names such as Ingrid and Nancy.

NOTES TO NOUN DECLENSIONS

MASCULINE AND NEUTER (CLASS I) NOUNS

1. (a) Many masculine nouns ending in -r add -j- throughout their declension (see consonant alternations, p. 21), e.g. doktor ~ doktorja, the nominative and genitive/accusative cases of the word 'doctor'. Other words in common use include:

cár 'tsar', kúhar 'cook', papír 'paper'
The rule, however, is limited, and many nouns in common use ending in -r do not add a -j-.
Among them are found:

bór 'pine'  góvor 'speech'
dár 'gift'  séver 'north'
dvór 'court'  Máribor (city name)
Nouns with a "fleeting" vowel (see 1. above) do not add a -j, so that, for example, names of months ending in -er, e.g. septembér 'September', do not add -j-, but those ending in -ar do, e.g. fébruar 'February'.

(b) The -j- is also added to foreign borrowings ending in a vowel, e.g. táksi ~ táksija 'taxi' and komité ~ komitéa 'committee'. These nouns are masculine.

2. Nouns ending in -e which designate masculine beings as well as a few neuter nouns add the suffix -et- in all declined forms, while some other neuter nouns add the suffixes -en- or -es- throughout their declensions:

(a) The suffix -et- occurs in the word ôčë ~ očëta, the nominative and genitive/accusative
cases of the word for 'father'. The same suffix occurs in a few proper names, e.g. Jóźê
Jóźeta 'Joseph' and the masculine noun
fantè fantéta 'boy', as well as in the
following neuter nouns:

déte ~ déteta 'baby'
deklè ~ dekléta 'girl'
tèle ~ teléta 'calf'

(b) The suffix -es- occurs in a group of
commonly used neuter nouns ending in -ó
(see 10. (c) below also):
drevó ~ drevésa 'tree'
koló ~ kolésa 'wheel'
nebó ~ nebésa 'sky'
peró ~ perésa 'pen'
teló ~ telésa 'body'

(c) The suffix -en- occurs in a few commonly
used neuter nouns ending in -me:
imé ~ iména 'name'
vremé ~ vreména 'weather'

3. A small number of monosyllabic Class I mas-
culine nouns in common use take an optional
stressed -ú ending in the genitive singular,
e.g. dář ~ darú/dára 'gift'. Others include:
gláš 'voice' móst 'bridge'
grád 'castle' nós 'nose'
lás 'hair' sád 'fruit'
léd 'ice' sín 'son'
lés 'wood' stráh 'fear'
méd 'honey' zíd 'wall'
mír 'peace'

4. A relatively large group of monosyllabic
Class I masculine nouns are like móst and add
the suffix -ov- in the dual and plural (see
the declension of móst on p. 26). Among the
most frequently encountered are:
brég 'shore' móst 'bridge' tók 'current'
cvét 'flower' nós 'nose' vál 'wave'
dár 'gift' pás 'belt' véter 'wind'
dól 'debt' pláz 'avalanche' vólk 'wolf'
Grammar

Nouns

dům 'house'  plůd 'fruit'  vůz 'car'
důh 'spirit'  rěd 'order'  vrát 'neck'
-glás 'voice'  sín 'son'  vřh 'peak'
god 'name day'  stráh 'fear'  vůt 'garden'
grád 'castle'  svět 'world'  zíd 'wall'
lés 'wood'  tát 'thief'  zvón 'bell'

5. (a) A few masculine nouns take the ending -jé instead of -i in the nominative plural:
   lás ~ lasjé 'hair'
   móž ~ možjé 'man'
   zób ~ zobjé 'tooth'
   člůvek ~ ljudjé 'person'

(b) A number of other masculine nouns may take either -je or -i in the nominative plural, including:
   brát ~ brátje/bráti 'brother'
   děd ~ dědéje/dédi 'grandfather'
   gospód ~ gospódje/gospódi 'sir/Mr.'
   študent ~ študentje/študenti 'student'

6. The normal ending for the genitive dual/plural of masculine nouns is -ov. A few masculine nouns, however, take a zero (#) ending (note the change in vowel quantity between the nominative singular of kǒnj and otrók):
   kǒnj 'horse'  otrók 'child'
   lás 'hair'  vůz 'car'
   móž 'man'  zób 'tooth'

The genitive plural of člůvek (nominative plural ljudjé) 'person' is ljudí (see 10.(a) below).

7. The dative plural for some masculine nouns is -ém instead of -om:
   lás ~ lasém 'hair'
   ljudjé ~ ljudém 'people'
   móž ~ možém 'man'
   zób ~ zobém 'tooth'

8. The normal locative dual/plural ending for masculine and neuter nouns is -ih. A few nouns, however, take the ending -éh, including:

33
drvá ~ drvéh  'firewood'
lás ~ laséh  'hair'
ljudjé ~ ljudéh  'people'
móž ~ možéh  'man'
tlá ~ tléh  'floor'
zób ~ zobéh  'tooth'

9. The normal ending for the instrumental plural of masculine and neuter nouns is -i, while a few nouns take the ending -mi:

   drvá ~ drvmí  'firewood'
lás ~ lasmí  'hair'
ljudjé ~ ljudmí  'people'
móž ~ možmí  'man'
tlá ~ tlémí/tlí  'floor'
zób ~ zobmí  'tooth'

10. A number of nouns in common use display changes in the stress or form of their stems:

   (a) Forms in the singular for the word člůvek 'person' display a stress shift but are otherwise regular:

      člůvek, člůvéku, člůvékom.

   Its dual forms are: člůvéka, člůvékama.
   Its nominative plural is ljudjé (see also notes 5.(a), 6., 7., 8. and 9. above)

   (b) Forms in the singular for the word otrůk 'child' are otrůka, otrůku, otrůkom.
   Its dual forms are: otrůka, otrůkama.
   Its nominative plural is otrůci, and the other forms are otrůke, otrůk, otrůkom,
   otrůcih, otrůki.

   (c) The following two neuter nouns add an -es suffix and have a consonant alternation throughout their declensions:

      uhó ~ ušěsa 'ear'
      okó ~ očěsa 'eye'

   [Note: The plural of okó is očí. It is declined like stvár, i.e it becomes a feminine noun. See p. 27.]
11. The noun dan 'day' is declined as follows:

<table>
<thead>
<tr>
<th></th>
<th>singular</th>
<th>dual</th>
<th>plural</th>
</tr>
</thead>
<tbody>
<tr>
<td>N dan</td>
<td>dnán</td>
<td>dnéva</td>
<td>dnévi</td>
</tr>
<tr>
<td>A dán</td>
<td>dání/dnéva</td>
<td>dání/dnéve</td>
<td>dání</td>
</tr>
<tr>
<td>G dné/ dnéva</td>
<td>dání</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D dnévu</td>
<td>dnévoma</td>
<td></td>
<td>dnévom</td>
</tr>
<tr>
<td>L dné/ dnévu</td>
<td>dnéh/dnévih</td>
<td>dnéh/dnévih</td>
<td></td>
</tr>
<tr>
<td>I dném/ dnévom</td>
<td>dnéma/dnévoma</td>
<td>dnémi/dnévi</td>
<td></td>
</tr>
</tbody>
</table>

**FEMININE (CLASS II) NOUNS**

1. Borrowed nouns ending in -a are declined like Class II feminine nouns, e.g. fúncija 'function'.

2. The normal genitive plural ending for nouns in Class II is zero (#), but a small number may be found with the ending -á, e.g.
   
   görá ~ gör/gorá 'mountain'
   sestra ~ sester/sestrá 'sister'
   and one in -í: beséda ~ beséd/besédi 'word'.

3. The noun gospá 'madam'/ 'Mrs.' has exceptional endings:
   -é in the dative/locative singular and in the nominative/accusative dual/plural
   -á in the genitive dual/plural
   -éma in the dative/instrumental dual
   in the plural -ém (dative), -éh (locative), -émi (instrumental)

4. The feminine nouns of Class II which end in a consonant almost always have the ending -ev.
   Also included here are the nouns
   máti 'mother' and hóti 'daughter'
   (the genitive being mátere and hótere, the accusative máter, hóter and the instrumental máterjo, hóterjo).

5. To feminine nouns of Class II ending in -a belong a number of masculine nouns, e.g. slúga 'servant', koléga 'colleague' and vójvoda 'duke'. They are grammatically feminine (i.e.
they decline like feminine nouns), but their modifiers are always masculine and decline as masculine modifiers, e.g. 'our man-servant':

nominitve  genitive
nàš slúga  nášega slúge

Despite the preceding rule, it is noted that there is a growing tendency to decline these nouns as masculine nouns of Class I. In the sentence which follows the genitive singular of the word koléga occurs as koléga instead of the expected kolége:

Môjega koléga ni túkaj.
'My colleague isn't here.'

(See pp. 105 and 121-122 for an explanation on the use of the genitive in sentences of this type.)

FEMININE (CLASS III) NOUNS

A comparison of the declensions for the nouns mísel and stvár on p. 27 reveals a different set of endings for the instrumental singular, the dative and the instrumental dual, and the dative, locative and instrumental plural for those nouns which take the stress on the ending (mostly monosyllabic ones such as kóst 'bone'):

-ijo, -ima, -im, -ih, -imi (unstressed) as opposed to

-jó, -éma, -ém, -éh, -mí (stressed)

Further, there is a small group of nouns like mísel which have the ending -jo in the instrumental singular, -ma in the dative and instrumental dual, and -mi in the instrumental plural, e.g. mìš 'mouse'.

NOTES FOR STRESS ON NOUNS

1. As noted earlier (see p. 19), nouns may have a non-mobile stress, i.e. the place of stress remains on the same syllable throughout the declension. Many masculine nouns have an A stress pattern on the root, such as in the word pótnik on p. 26. A small group of nouns
displays a B pattern with the stress on the ending, e.g. stebèr [stɛbɛr] 'pillar'. A limited number of nouns, including some words in frequent usage, take a C stress pattern in which the stress moves from the root to the ending in the genitive singular and in all dual and plural forms, e.g. móst (p. 26).

2. The vast majority of neuter nouns display an A stress pattern, e.g. léto (p. 26). A few nouns have a B stress pattern, e.g. sencè 'temple'. In those neuter nouns with a C stress pattern the nominative and genitive singular endings are stressed, while on the remaining forms the stress moves to the root of the word, e.g. srcé (p. 26).

3. In a large number of words, including both masculine and neuter nouns, a variant of the A stress pattern is seen in which the place of stress moves within the stem so that it always falls on the penultimate (next to the last) syllable, e.g. jézik ~ ježíka 'language', tèle~ teléta 'calf'. Others include:
   bøžič 'Christmas' prèdlog 'proposal'
   čløvek 'person' prøstor 'space'
   jélen 'deer' råzred 'classroom'
   Jèrnej (proper name) sòsed 'neighbor'
   mèdved 'bear' zákon 'law'
   òtok 'island' závod 'institution'

4. The vast majority of feminine nouns ending in -a display an A stress pattern, e.g. knjíga (pp. 26-27). In a small group of nouns in which the -e- of the stem represents the vowel [a] there is an optional B stress pattern, e.g. e.g. stèza/stedâ 'path'. There is a group of nouns in common use with an optional C stress pattern moving from the stem to the ending in the following cases: accusative, genitive and instrumental singular, dative and instrumental dual, all cases of the plural, e.g. gòra (see note on p. 28 with reference to gòra).
5. Feminine nouns of Class II ending in a consonant do not display a B or C stress pattern, i.e. the stress is a non-mobile A pattern remaining on the stem, e.g. cérkev (but note possible variants in stress and form for the preceding word on p. 28).

6. Some feminine nouns of Class III may have an A stress pattern throughout the declension, as in mísel (p. 27), while the others display a C stress which moves to the ending in the genitive and instrumental singular and in all forms of the dual and plural, e.g. stvár (see p. 27 and comments on Class III nouns on p. 34).
ADJECTIVES

Adjectives in Slovene, like nouns, distinguish gender, case and number. They are declined and have sets of endings, and they reflect the gender, case and number of the noun which they modify. For masculine adjectives in the nominative singular, there is the possibility of distinguishing between the indefinite ('a'/'an') and the definite ('the') forms. With the exception of the nominative and accusative cases, in the singular masculine and neuter adjective declensions coincide. In the singular feminine adjectives have endings like the noun knjīga (see pp. 26-27). In the dual, there is an opposition of masculine to feminine and neuter for the nominative-accusative case only. In the plural, forms for four of the six cases are identical for all three genders.

Adjectives in Slovene have three degrees: positive, comparative and superlative. Each is fully declined.

The vast majority of adjectives in Slovene are declined like bogāt 'rich' which follows:

<table>
<thead>
<tr>
<th>MASCULINE / NEUTER</th>

**NOTES TO ADJECTIVE DECLENSIONS**

1. The definite form of the adjective is made by adding the ending -i to the indefinite masculine adjective as in bogát člóvek 'a rich man' vs. bogáti člóvek 'the rich man'. Appropriate questions eliciting the indefinite or definite form include the words kášen and katéri:
   Kášen člóvek? 'What kind of a person?'
   Bogát člóvek.
   Katéri člóvek? 'Which person?'
   Bogáti člóvek.

2. (a) Adjectives ending in -ski, -ški, -ji, -nji cannot be used in the masculine nominative singular without -i:
   - slovénški 'Slovene'
   - angléški 'English'
   - dívji 'wild'
   - srédnji 'middle'

   (b) Adjectives which are derived from nouns and indicate possession and are formed with the suffixes -ov/-ev or -in are inherently definite and do not require the definite form ending -i in the masculine nominative singular, e.g. očétov 'father's', mátérin 'mother's'

   (c) In certain instances the use of the definite form is obligatory, e.g. with ordinal numerals pěti dán 'the fifth day', after demonstrative tísti sméšni člóvek 'that funny man', with comparative adjectives mlajši brát 'younger brother' and in phrases in which the adjective qualifies the meaning of a modified
noun such as in bělí krůh 'white bread' or sádni v ít 'orchard'.

3. (a) One adjective, m ā j h en 'small', has special definite forms for all three genders: máli, mála, málo.

(b) The adjective v ě lik 'big' also has forms for the definite which are distinguished by vowel quality and a stress shift in all three genders:
    Indef. v ě lik, velíka, velíko
    Def. v ě liki, velíka, velíko

(c) Two adjectives display a shift in stress in the masculine forms: d ě bel ~ d ě bí li 'fat', r ō jen ~ roj eni 'born'.

4. Adjectives whose stems end in -c, -x, -ź, -ñ and -j end in -e in the neuter nominative and accusative rather than the expected -o, e.g. domáč e 'domestic'. (See comment p. 22.)

5. Many adjectives, particularly those ending in a simple -k, -n, -r or -l, have an -a- or an unstressed -e- [=ə] present in the masculine nominative singular form. These are fleeting vowels which drop in all other forms of the adjectival declension, e.g.
    tež ák(or těž ek) ~ těž ki, těž ka, těž ko
    'difficult'
    tájen ~ táj ni, táj na, táj no 'secret
    d ò ber ~ d ò bri, d ò bra, d ò bro 'good'
    t ō pel ~ t ō pl i, t ō pla, t ō pl o 'warm'

6. A number of adjectives are not declined. Some display gender only, e.g. r á d, rá d a, rá d o
    (plural: rá di, rá d e, rá da) 'glad' (for the special use of r á d see p. 111), while a num-
    ber of adjectives of foreign origin display neither gender nor are they declined, e.g.
    š ík 'stylish', f ájn 'fine', g á y [géj] 'gay',
    bě x 'beige', príma 'top rate', e.g. príma
    h ot él 'a top rate/swell/first class hotel'.

41
The latter are quite popular, but only some are accepted in the literary language.

NOTES ON STRESS FOR ADJECTIVES

The vast majority of Slovene adjectives have an A stress pattern (non-mobile on the stem), i.e. bogat (see above). A small group of adjectives may have a B stress pattern (non-mobile on the ending in all forms), e.g. temen, temneg, etc. 'dark', but it is often an optional stress. The tendency is towards the A stress pattern for all adjectives. One finds, for example, the adjective temen in the variant forms teman and temen. The latter form is the preferred one, and the stress falls on the first syllable where it so remains throughout its declension. Note: The vowel in the root of this adjective is [æ].

THE COMPARATIVE DEGREE

The comparative degree of adjectives in Slovene is formed by the simple addition of one of the following suffixes: -ši, -ji or -ějiš to the root. The resulting forms are fully declined like adjectives in the positive degree (see notes for selection of suffix). Alternatively there exists a compound form employing the words bolj 'more' or manj 'less' before the positive degree of participles and those adjectives ending in -ji, -ov, -in, -ski and -ški, e.g. bolj razbit 'more broken', manj urejèn 'less orderly'. With either of the preceding formations, comparisons in Slovene are made by using the preposition od followed by the genitive case or the words kòt, kàkor or ko (the latter being more colloquial) followed by the nominative case:

Péter je mlájši od Bórisa.
'Peter is younger than Boris.'
Vèsnà je starèjša kòt (sem) jàz.
'Vesna is older than I (am).'  
Jànez nì takò stàr kàkor (si) tì.
'Janez is not as old as you (are).'
THE SUPERLATIVE DEGREE

The superlative degree of adjectives in Slovene is formed by the simple addition of the stressed prefix nàj- to the comparative degree: nàjlepši (= nàj- + -lep- + -s- + -i) 'prettiest' or by the use of the compounds nàjbolj 'most' or nàjmanj 'least', e.g. nàjbolj ohránjen 'the best preserved'. In constructions such as the following, either preposition od or izmed followed by the genitive case may be used: Dušan je od/izmed vseh nàjmocnejši. 'Dušan is the strongest of all.'

NOTES FOR FORMING THE SIMPLE COMPARATIVE

1. The suffix -š- occurs with monosyllabic stems ending in -b, -p and -d. The final -d of the stem undergoes an alternation before the addition of the suffix -š-. (See Consonant Alternations, p. 20.)

<table>
<thead>
<tr>
<th>Slovenian</th>
<th>English</th>
<th>Slovenian</th>
<th>English</th>
</tr>
</thead>
<tbody>
<tr>
<td>lép</td>
<td>'pretty'</td>
<td>lépši</td>
<td>'prettier'</td>
</tr>
<tr>
<td>slàb</td>
<td>'weak'</td>
<td>slábši</td>
<td>'weaker'</td>
</tr>
<tr>
<td>húd</td>
<td>'bad'</td>
<td>hújši</td>
<td>'worse'</td>
</tr>
<tr>
<td>mlád</td>
<td>'young'</td>
<td>mlájši</td>
<td>'younger'</td>
</tr>
<tr>
<td>ràd</td>
<td>'glad'</td>
<td>rájši</td>
<td>'gladder'</td>
</tr>
</tbody>
</table>

In some cases the final consonant of the stem is lost before the addition of the suffix -š-:

<table>
<thead>
<tr>
<th>Slovenian</th>
<th>English</th>
</tr>
</thead>
<tbody>
<tr>
<td>gód</td>
<td>'ugly'</td>
</tr>
<tr>
<td>téd</td>
<td>'hard'</td>
</tr>
<tr>
<td>gòši</td>
<td>'uglier'</td>
</tr>
<tr>
<td>tòši</td>
<td>'harder'</td>
</tr>
</tbody>
</table>

2. Adjectives which end in -ek, -ak or -ok drop that suffix, and the final consonant of the stem alternates.

<table>
<thead>
<tr>
<th>Slovenian</th>
<th>English</th>
<th>Slovenian</th>
<th>English</th>
</tr>
</thead>
<tbody>
<tr>
<td>globòk</td>
<td>'deep'</td>
<td>globlji</td>
<td>'deeper'</td>

<td>'wide'</td>
<td>šírši</td>
<td>'wider'</td>
</tr>
<tr>
<td>sládek</td>
<td>'sweet'</td>
<td>slájši</td>
<td>'sweeter'</td>
</tr>
<tr>
<td>tánèk</td>
<td>'thin'</td>
<td>tánjši</td>
<td>'thinner'</td>
</tr>
<tr>
<td>težàk</td>
<td>'heavy'</td>
<td>téžji</td>
<td>'heavier'</td>
</tr>
<tr>
<td>visòk</td>
<td>'tall'</td>
<td>víšji</td>
<td>'taller'</td>
</tr>
</tbody>
</table>
3. The suffix -j- occurs with monosyllabic stems ending in -g, -k and -h. Consonant alternations take place.

   blág 'mild'  blázji 'milder'
drág 'dear'  drážji 'dearer'
tíh 'quiet'  tíšji 'quieter'

4. The suffix -éjš- occurs with all other adjectives and is always stressed.

   bístér 'clear'  bistrējši 'clearer'
   bogat 'rich'  bogatějši 'richer'
   číst 'clean'  čistějši 'cleaner'
   míl 'gentle'  milějši 'gentler'
   močán 'strong'  močnéjši 'stronger'
   novy 'new'  novějši 'newer'
   stár 'old'  staréjši 'older'

5. The following adjectives have irregular comparatives:

   blížnji 'near'  blížji 'nearer'
   dóber 'good'  bólši 'better'
   dólóz 'far'  dálši 'farther'
   láhek 'easy'  lážji 'easier'
   mágheř/málí 'small'  mánějši 'smaller'
   vělik 'big'  věčji 'bigger'

6. A number of adjectives have alternate forms for the comparative. Some of those listed below are not in current use and may be found only in older literature or in dialects.

   globók 'deep'  glóbli or globóčji
   or globōkějši
   krátek 'short'  kráčji or krájši
   měhek 'soft'  méčji or mehkějši
   širòk 'wider'  šířši or šířji

7. In addition to forming comparatives by using the suffixes -š-, -j- and -éjš-, the positive form of an adjective may be prefixed by pre-giving the meaning 'too' or 'extremely':

   predólóg 'too long'
   prélép 'extremely pretty'
8. The construction čim...tem.... is used with the comparative degree of adjectives (as well as with adverbs) in the following way:

čim věčji, tem bóljši
'the bigger the better'
čim pametnějši, tem bòlj zahtéven
'the wiser the more exacting'
čim préj, tem bólje
'the sooner the better'
čim bòlj zgódaj, tem bólje
'the earlier the better'
ADVERBS

Adverbs in Slovene modify verbs, adjectives and other adverbs. They may come at the beginning, in the middle or at the end of a phrase or sentence. Adverbs are not declined and supply information about:

- **time**: kdáj 'when', védno 'always'
- **degree**: zeló 'very', samó 'only'
- **manner**: takó 'so', skúpaj 'together'
- **place**: kjé 'where', tükaj 'here'
- **amounts**: kóliko 'how much'

Others pose questions such as zakáj 'why' or causal relationships such as zató 'therefore'.

Those adverbs which can occupy a relative position in a sentence have special relative forms (see also note 3. on p. 52):

- **Kém gréš?**
  'Where are you going?'
- **Pójdi, kámor hóčeš!**
  'Go where you want!'
- **Kóliko denárja imáte?**
  'How much money do you have?'
- **Kólikor vém, očéta ní domá.**
  'As far as I know father isn’t home.'

Certain adverbs use the particle le for emphasis. When the particle follows the word it is written together with it. When le precedes it is separated by a dash, e.g. tàm + le > tàmle 'there'!, tjàle 'there'! (motion), tûle 'here'!, takóle 'so'!, as opposed to le + tû > le-tû 'here'!, le-tàm 'there'! (see note 5. on p. 53).

In addition to the adverbs provided above, adverbs derived from adjectives in Slovene are extremely common, e.g. tájno 'secretly' from tájen 'secret' and prijáznno 'kindly' from prijázen 'kind'. Adverbs derived from adjectives usually coincide with the neuter nominative singular form ending in -o or -e. Sometimes the -o is stressed in the adverb form, e.g. lepó 'beautifully', as opposed to the unstressed -o preferred for adjectives: lépo.

Like adjectives, adverbs derived from them may appear in the positive, comparative and superlative degrees. Refer to pp. 41-43 for their
formation. See also note 7. on p. 42 for the use of the prefix pre–.

lepő lépše nájlepše
'beautifully/more beautifully/most beautifully'

Listed below are commonly encountered adverbs which display consonant alternations or exceptional forms in the comparative. Many of the corresponding adjectives are on pp. 36–38.

The learner will notice that in a large number of cases there exist alternate forms with abbreviated suffixes so that, for example, both blíže and blížje, húje and hújše or méče, méčje, mehkeje or mehkéjše, may all be encountered. Native speakers of Slovene will often prefer one form over another, and some of the forms are found only in literary texts. The list below presents the shorter of the variant forms (shortest when applicable):

blízu 'near'
često 'often'
dólgo 'long (time)'
dobro 'well'
drágo 'costly'
globoko 'deeply'
hudó 'badly'
kasnó 'late'
krátko 'briefly'
lahkó 'easily'
málo 'little'/ 'few'
mehkó 'softly'
nízko 'low'
širóko 'widely'
tího 'quietly'
velíko 'a lot'/ 'much'
visóko 'highly'

blíže 'nearer'
čéšče 'more often'
dálj 'longer'
bólje 'better'
tráže 'more costly'
glóblje 'more deeply'
húje 'worse'
kasnéje 'later'
krájše 'more briefly'
láže 'more easily'
mánj 'less'
méče 'more softly'
níže 'lower'
šírše 'more widely'
tíše 'more quietly'
véč 'more'
víše 'more highly'

In addition to being derived from adjectives, a number of adverbs in Slovene are formed from other parts of speech.

examples

from pronouns:
zakáj, čemú 'why', 'what for'
(both derived from káj 'what')
from nouns:

danes 'today' from dan 'day'
nocoj 'tonight' from noc 'night'
jutri 'tomorrow' from juto 'morning'

from verbs:

ponevedoma 'unknowingly'
from vedeti 'to know'
gledé 'in view of'
from gledati 'to look at'
**PRONOUNS**

Pronouns in Slovene are fully declined. They are traditionally divided into the following categories: **personal,** **interrogative,** **indefinite,** **possessive,** **demonstrative** and **relative.** The most important ones are presented here.

Personal pronouns have stressed and unstressed forms (clitics). Stressed forms are used to indicate emphasis. Additional information on clitics is found in the chapter on word order. In the spoken and written language personal pronouns in the nominative case are normally omitted except for emphasis or to avoid confusion of person in ambiguous verbal forms, e.g. the conditional. Declensions of personal pronouns are given below. Acceptable alternate forms are those listed as "or", while the clitic forms are preceded by a slash (/). Forms with two stresses indicate that either stress may be found.

</tbody>
</table>
[Note: Short forms of the accusative case are always combined and written together with monosyllabic prepositions, and the stress falls on the preposition, e.g. záme 'for me' (as opposed to the emphatic za mene), prédte 'before you', pôdnjo '(moving) under it'. Compare the latter form with the instrumental case pod njó '(resting) under it'. Further, there is a special contraction for the masculine and neuter accusative. It is -nj (as opposed to the enclitic form ga) seen in nánj 'onto it' (cf. na njêga).]

Pronouns  Grammar

ták  táko  táka  'such'
tákšen  tákšno  tákšna  'such a'
tólik  tóliko  tólika  'so much'
tólikšen  tólikšno  tólikšna  '(as) much (as)'

3. The following list contains a number of the most commonly used interrogative, relative and indefinite pronouns:
čigáv  čigávo  čigáva  'whose'
drúg  drúgo  drúga  'other'
kàk  káko  káka  'some'/'any'
kàkšen  kàkšno  kàkšna  'any kind of'
kákšen  kákšno  kákšna  'what kind of'
katéri  katéro  katéra  'which'/'whose'
kólik  kóliko  kólika  'how large'
kólikšen  kólikšno  kólikšna  '(as) large (as)'
néki  néko  néka  'a certain'
noběn  noběno  noběna  'none at all'
sám  sámo  sáma  'alone'
vès  vsè  vsà  'all'
vsák  vsáko  vsáka  'every'

The pronouns in 1., 2 and 3. above are fully declined, differing in detail from the adjectival declensions found on p. 37. Note the declensions of tá 'this' and vès 'all':

**NOTES ON PRONOUNS**

1. Standard grammars are not consistent in their presentation of the dual forms for personal pronouns. The nominative case of the dual is listed in the charts above as mídva / mídve, vídva / vídve and ōnádvá / ōnidvá. One may also encounter the following variant forms for the nominative case of the feminine: mědve / vědve / onědve. Similarly, not all grammars agree on allowable forms for the locative of the dual. In addition to those listed in the chart, one may also also find the forms: náma váma njíma

2. (a) Indefinite pronouns also include:
   - nihčé (gen. nikógar) ‘nobody’
   - nič (gen. ničéasar) ‘nothing’
   - noběden ‘not one’
   (See p. 105 for information concerning the use of double negatives.)

   (b) The prefixes malo-, marsi-, ne-, ni- and vsak- may be added to a number of pronouns (as well as to adverbs) such as kdó, káj, kàk, kàkšen and katéri producing words with indefinite meanings, e.g.
   - někdo ‘somebody’
   - nikdo ‘nobody’
   - vsákdo ‘everybody’
   - málokdo ‘hardly anyone’
   - mårsikdo ‘many a person’
   - někaj ‘something’
   - málokaj ‘hardly anything’
   - mårsikaj ‘many a thing’
3. Relative pronouns (and adverbs) in Slovene are formed by adding the suffix -r(-) to the root of pronouns and are fully declined. (See, for example, the declensions of kdór and kár on p. 43.) Included among relative pronouns are the words kákršen 'like', kólikršen 'such as' and čígar 'whose'. The latter is not declined and refers to masculine nouns only, e.g.

Gospódu, čígar híšo vídiš, čésto prodájam knjíge. 'I frequently sell books to the gentleman whose house you see.'

If the noun of reference is not masculine, the proper case form of the relative pronoun katéri would be used in place of čígar:

Gospodínji, katére híšo vídiš, prodájam knjíge. 'I sell books to the lady whose house you see.'

Glédi skózi Škno, katérega vídiš.

'Look through the window which you see.'

[See p. 108 for an explanation on the use of the genitive case in the preceding example.]

4. The indeclinable ki is a relative pronoun meaning 'who' or 'which'. When appearing in the function of the nominative case, ki requires no pronoun. When functioning in any other case, ki must be used in combination with a short form (clitic) of a personal pronoun whose gender and number agrees with the noun of the main clause to which it refers. The case of the pronoun, however, is governed by the verb or preposition of the relative clause, e.g.

knjíga, ki je bilà na mízi
'the book which was on the table'

je tísti fánt, ki takó lepó pôje
'that's the same boy who sings so beautifully'

BUT

člóvek, ki ga vídiš
'the person whom you see'

pšenica, ki jo kupúješ
'the wheat which you are buying'

ljudjé, ki jim govoriš
'the people to whom you are speaking'
5. The unstressed particle le is frequently used with pronouns (as with adverbs - see p. 44) in Slovene and serves to emphasize a word or phrase. When it precedes the word, it is joined by a dash, and when it follows it is written together with the word, e.g.

Vprašali smo tístole Ženo
or
Vprašali smo le-tó Ženo.

'We asked that very woman.'

In the second example a form of le-tá occurs. It may also be written as tále. Pronouns which can be combined with le include Ónale / le-ôna 'she!', tákšnale 'such a one!' and others.
NUMERALS

The two main categories of numerals in Slovene are: cardinal and ordinal. A list of them follows:

<table>
<thead>
<tr>
<th>Cardinal</th>
<th>Ordinal</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>nìč [núla] [níčti/núlti]</td>

56 54
Grammar Numerals 55

500 pětsto pětstotí
600 šeststo šeststotí
700 sedemsto sedemstotí
800 osemsto osemstotí
900 devětsto devětstotí
1000 tisíc tisóč
1001 tisíc ěna tisóč přívi
2000 dvě tisíč dvátísoči
3000 tři tisíč tritisóči
4000 štěri tisíč štíritísóči
5000 pět tisíč pěttísóči
100,000 stů tisíč stótísóči
1,000,000 milijón milijónskí/milijónti
2,000,000 dvě milijóna dvamilijónti
3,000,000 tři milijóni trimilijónti
4,000,000 štěře milijóni štírimilijónti
5,000,000 pět milijónov petmilijónti
1,000,000,000 milijárda milijárden

Some fractions have their own special forms, e.g.
1/2 ěna polovíca
1/3 ěna tretjína
1/4 ěna četrtína OR ěn četťt
1/5, 1/6 ěna petína, ěna šestína, etc.

In comparing cardinal and ordinal numerals, the student will note that ordinals from 'fifth' onward are formed by the addition of the suffix -i to the cardinal, e.g. pět + i = pěti. The cardinals sedem and osem drop the final -e [e]. The cardinal stů and its compounds take the suffix -ti, as does milijón (which also has an alternate form in -ski), as well as the rarely used níčti/nůlti. Milijárden adds the suffix -en [en]. The ordinals přívi, drúgi, tretjí and četťt should be learned as separate vocabulary items. [Observe accent and stress changes from cardinal to ordinal!]

In the preceding list the numerals from 100,000 to 1,000,000,000 are given in their American style, i.e. with commas. The learner is reminded that Slovene, in standard European style, uses the comma to set off millions (1,000,000 = 1,000.000) and to designate fractions ('three
tenths' = 0.3). Further, in printed texts when numerals are followed by no punctuation they are to be read as cardinals. A period (i.e. decimal point) is used to indicate ordinals and to set off thousands:

1, 8, 3 = ěna ('one' is read as feminine), ósem, trí
1., ., 3. = póvi, ósmi, trétji
100.000 = stó tísoč

DECLENSIONS

The cardinal numeral 'one' occurs in the singular and is declined like bogát (p. 33). The cardinals 'two', 'three' and 'four' share a substantial number of endings in common with dual and plural endings for adjectives but display a number of endings which require special attention. Each of the preceding is presented in its entirety below. Ordinal numerals are adjectives, e.g. póvi, póva, póva 'first' and are declined like bogáti (see p. 37 and note 2.(c) on p. 38).

\[
\begin{array}{ccc}
(m) & (n) & (f) \\
N & ěden / ěn & ěno & ěna \\
A & N/G & N & ěno \\
G & ěnegā & ěne \\
D & ěnemu & ěni \\
L & ěnem & ěni \\
I & ěnim & ěno
\end{array}
\]

The numerals 'two', 'three' and 'four' distinguish gender in the nominative and accusative cases:

\[
\begin{array}{ccc}
(m) & (n/f) \\
N & dvá tríje štirje & dvé trí štíri \\
A & dvá trí štíri & dvé trí štíri \\
G & dvěh tréh štírih \\
D & dvéma trém štírim \\
L & dvéh tréh štírih \\
I & dvéma trémi štírimi
\end{array}
\]

Numerals from 5 to 99 do not distinguish gender and are declined like adjectives in the genitive,
dative, locative and instrumental plural. *Five* is declined below.

\[
\begin{array}{ll}
N/A & \text{pét} \\
G & \text{pětih} \\
D & \text{pětími} \\
L & \text{pětih} \\
I & \text{pětími}
\end{array}
\]

**Case agreement with numerals**

(a) The number *'one'* is an adjective and modifies nouns in the singular. If a verb appears in the sentence, it is also in the singular. The special masculine form *ěden* stands alone, i.e. does not act as a modifier:

Imá pět otrôk, pa je le ěden njêmu podôben.

*He has five children, but only one resembles him.*

En sám gospôd je prišel.

*Just one gentleman arrived.*

(b) The number *'two'* is a dual, and the noun and verb occurring with it are also in the dual:

Dvá gospôda sta prišlà.

*Two gentlemen arrived.*

(c) The numbers *'three'* and *'four'* behave like plural adjectives, as do the nouns which they modify. The verb is also in the plural:

Tríje/štírje gospôdje so prišli.

*'Three/four gentlemen arrived.*

(d) When used in the nominative case, the numbers *'five'* and higher require that nouns and adjectives which follow be in the genitive plural. In all other cases the numbers, nouns and adjectives agree in case. The verb, however, occurs in the third person neuter singular:

Pět gospôdov je prišló.

*Five gentlemen arrived.*

Desět lépih dekléte se je pogovárjalo.

*'Ten pretty girls were talking.*
NOTES ON NUMERALS

1. Stó 'one hundred' is declined like pét: stó, stótih, etc. (A special form stótina exists to indicate groups of one hundred and is used in both the singular and plural, e.g. stótine ljudí 'hundreds of people'). The numeral tísoc 'one thousand' is declined like a masculine noun.

2. In practical terms there is a tendency not to decline numerals other than digits and simple multiples of tens in the spoken language. At the early stages of language learning, the student of Slovene will need to know certain forms of numeral declensions, e.g. those which will be needed in telling time: ob šestih 'at six o'clock' (see pp. 114-115).

3. By the addition of the suffix -krat to cardinal numbers, one obtains an adverb of frequency: enkrat 'once', dvákrat 'twice', etc. Examples:
   enkrat na dán
   'once a day'
   Bíl je enkrat tóčen.
   'He was punctual for once.'
   Ḍon je dvákrat staréjši od mene.
   'He's twice as old as I.'
   Dánes sem ga dvákrat vîdel.
   'I saw him twice today.'

4. By adding the suffix -ič to ordinal numerals, one obtains an adverb of time:
   prvič 'firstly', 'for the first time'
   drúič 'secondly', 'for the second time'
Example:
   Prvič sem v Ljubljáni.
   'This is my first time in Ljubljana.'
   Drúič se oženiti
   'to get married for the second time'
   Včasih se hálí, drúič kriči.
   'Sometimes he jokes, and at other times he shouts.'

5. The word obá / obé 'both' behaves in all respects like dvá / dvé, including in its
declension (oběh, obéma). Compare the case forms with the declensions of tá and vèš.
[Note: Native speakers feel dvá / dvé and obá / obé to be pronouns.]

6. Slovene has collective numerals, i.e. words used to indicate groups or units. They are declined like adjectives.

(a) There are the special forms enój, dvój, trój and četvér. Higher collectives are formed by adding the stressed suffix -ér to the cardinal form of the numeral, e.g. petér, tisočér. They are used with nouns which have no singular, e.g. dvójα vráta 'two doors' or to designate the number of different types of an object, e.g. sedméra vína 'seven varieties of wine'.

(b) The neuter singular form may be used to designate groups of people or objects. In such cases the noun follows in the genitive plural, e.g. desetére ljudí 'a group of ten persons'.

[See also note. 1. above concerning stótina.]
PREPOSITIONS

Each preposition in Slovene requires the use of one or more cases when used with nouns and adjectives. In those instances where the same preposition may be used with more than one case, its meaning changes. Compare, for instance, the preposition z (s) when it requires the genitive case and when used with the instrumental case. A list of the most common prepositions and the cases which they govern follows accompanied by illustrative phrases. The translations attempt to provide each preposition's basic meaning, but the learner is reminded that some prepositions, e.g. za 'for', cover a wider variety of senses than can be expressed by a single "equivalent" in English. The examples each indicate one possible meaning of the given preposition.

GENITIVE

blízu 'near'
   Vóz je blízu hišce.
   'The car is near the house.'

brez 'without'
   hiša brez vrta
   'a house without a garden'

do 'up to' / 'till'
   do danahnjega dne
   'up to this day'

iz 'from' / 'out of'
   priti iz Ljubljane
   'to come from Ljubljana'

ízmed 'from among'
   Ízmed híš se je slíšal krík.
   'A cry was heard from among the houses.'

íznad '(from) above'
   Ón je visoko íznad njih.
   'He towers high above them.'

ízpod 'from under'
   Vóda teče ízpod skále.
   'Water flows from under the cliff.'

ízpred 'from in front of'
   Odpeljal je ízpred híše.
'He left from in front of the house.'

ízza 'from behind'
Sónce síje ízza obláka.
'The sun shines from behind the cloud.'
mímo 'by' / 'past'
Šla je mímo cérkve.
'She walked past the church.'
namésto 'instead of'
Pójdi tjá namesto méne.
'Go there in my stead.'
od '(away) from'
pót od Ljubljáne do Zágreba
'the way from Ljubljana to Zagreb'
okólí / okróg 'around'
Pogóvor se je súkal okólí politike.
'The conversation revolved around politics.'

okróg pêtih
'around five o'clock'
póleg 'beside'
 hodíti póleg njé
'to walk beside her'
préko 'across'
préko hríbov in dolín
'the length and breadth of the country'
 (= 'across the hills and valleys')
rázen 'except'
 vši rázen méne
 'everybody except me'
srédi 'in the middle of'
srédi oceána
 'in the middle of the ocean'
z (s) 'off of' / 'from'
z míze vzéti
 'to take (something) off of the table'
 s téga stalísča
 'from that point of view'

[See end notes for spelling of z / s.]
zarádí 'because of'
Zarádí bolézni je ostál domá.
 'He stayed home because of illness.'
zráven 'beside'
Šóla je zráven cérkve.
 'The school is next to (beside) the church.'
Prepositions

DATIVE

k 'to' / 'towards'
Grém k odvětníku.
'I'm going to (my) lawyer's.'
h glávi
'(pointed) towards the head'

[See end notes for spelling of k as h.]

kljub 'in spite of'
Kljub tému všemu ní sréčen.
'In spite of all that he's not happy.'

próti 'towards'
próti začetku léta
'towards the beginning of summer'

ACCUSATIVE

čež 'across'
ítí čež réko
'to go across the river'

med 'among'
pásti med rázbojnik
'to fall among thieves'

na 'onto' / 'at'
Okno gléda na úlico.
'The window looks onto the street.'

na prv po gléđ
'at first sight'

nad '(to go) above'
Meč mu je víšel nad glávo.
'The sword hung above his head.'

ob 'against'
ob mízo udáriti
'to bang against the table'

po '(to go) for' / 'to get
posláti po zdrávnik
'to send for a doctor'

pod '(to go) under'
Dájte tó pod kljúč.
'Put it under lock and key.'

pred '(to go) in front of'
Prédme naj ne hódi. [see note on p. 49]
'Don't walk in front of me.'
skóz(i) 'through'
poglédati skóz(i) ôkno
 'to look out (through) the window'
v 'into'
Grém v híšo.
 'I'm going into the house.'
za
  for' / '(to go) behind'
vstópnica za gledalíšče
 'a ticket for the theater'
Sónce gré za gôro.
 'The sun is going behind the mountain.'
zóper
 'against'
Sem zóper tó.
 'I'm against that.'

LOCATIVE

na
 'on'
Víno je na mízi.
 'The wine is on the table.'
o
 'about'
govoriti o vójni
 'to talk about war'
ob
 'at' (in time expressions) / 'by'
ob tréh [see p. 91]
 'at three o'clock'
drevó ob Sávi
 'a tree by the Sava (river)'
po
 'after'
po božíchu
 'after Christmas'

pri
 'at' / 'near'
pri vášem brátu
 'at your brother's (place)'
pri ôknú
 'near the window'
v
 'in'
bíti v Ljubljáni
 'to be in Ljubljana'

INSTRUMENTAL

med
 'between'
med néhom in zemljó
 'between heaven and earth'
Prepositions

nad  'above'
    Sónce je nad obzójrjem.
    'The sun is above the horizon.'

pod  'under'
    sedéti pod drevésom
    'to sit under the tree'

pred 'in front of'
    Vóz je pred híšo.
    'The car is in front of the house.'

z  (s)  'with'
    z vsò močjó
    'with all one's might'
    vštáti s sóncem
    'to get up with the sun'
[See end notes for spelling of z/s.]

za  'behind' / 'after'
    Za híšo je všt.
    'There's a garden behind the house.'
    êden za drúgim
    'one after another'

NOTES TO PREPOSITIONS

1. The preposition z/s is used with the genitive and instrumental cases. It is spelled z when used before a word beginning with a voiced consonant or with a vowel. Likewise, s is used before a word beginning with a voiceless consonant (see pp. 19-20), e.g.
    z ávtom  'by car'
    z dédom  'with grandfather'
        but
    s póšto  'by mail'
    s tebój  'with you'

2. The preposition k is used with the dative case. It is spelled h when it comes before a k or g, e.g.
    h kôñju  '[to walk] towards the horse'
    h glávi  '[to point] towards the head'
VERBS

Slovene has a rich verbal system. There are special forms for the infinitive and supine, described below, as well as sets of forms which change by person (conjugation). The verb in Slovene is further characterized by the category of tense (present, past and future) and by mood (indicative, imperative, optative, conditional), aspect (imperfective and perfective) and voice (active, passive and medium). Finally, it has participles (adjectival and adverbial) which are derived from verbs and also have sets of forms. Each of the preceding is summarized below with a more detailed treatment of each provided throughout this chapter.

INFINITIVE

Slovene verbs are entered in the dictionary in their infinitive form. The vast majority of verbs have an infinitive ending in -ti, with a small number ending in -či. (The -i is not normally pronounced in conversational Slovene in the Ljubljana area.)

Examples:

délati 'to work'
mísliti 'to think'
sésti 'to sit down'
kupováti 'to buy'
pisáti 'to write'
dvígniti 'to lift'
razuméti 'to understand'
nésti 'to carry'
réči 'to say'
molčáti 'to be silent'
vídeti 'to see'
čúti 'to hear'
pítí 'to drink'
prítí 'to arrive'

SUPINE

As opposed to the infinitive ending in -ti or -či, the supine has the endings -t or -č.
It is used after verbs of motion such as íti 'to go', príti 'to arrive', hodíti 'to walk', peljáti 'to lead' and těči 'to run', seen in the following examples:

infinitive supine

délati Grém délat.
   'I'm going to work.'
léči Pójdi léč.
   'go lie down!'
nakupováti Šlá je nakupovávat.
   'She went shopping.'
pěči Grém pěč.
   'I'm going to bake.'
pisáti Těci písat.
   'Run off to write.'

It should be noted that supine forms do not necessarily coincide with the shortened conversational forms of the infinitive. In some cases there is a different accent:

infinitive long/short forms supine

délati / délat but délat
léči / léč léč
spáti / spát spát

PERSON AND CONJUGATION

The present tense is conjugated with a set of endings for three persons in all three numbers: singular, dual and plural. The present tense of the Slovene verb is divided into four basic classes in this presentation, with a fifth residual group of verbs which have irregular conjugations.

TENSE

There are three tenses in Slovene: the present, past and future. The present tense is simple, i.e. it is non-compound, while the past
and future tenses are compound and are formed by combining conjugated forms of the verb *bíti* 'to be' with the participle in -l, normally called the *descriptive participle*. In older literature one may encounter the compound *past perfect tense*, no longer in active use and not presented here.

**MOOD**

Mood indicates the speaker's attitude about an action or condition. This may be expressed in four ways in Slovene:

1.) The *indicative* mood is used to express factual statements or elicit information as in the following question and reply (statement):
   Kám gréš?
   'Where are you going?'
   Grém domóv.
   'I'm going home.'

2.) The *imperative* mood is used in order to express commands and requests. It has sets of forms for the second person singular and the first and second persons of the dual and plural.

3.) The *optative* mood is used as an indirect appeal for the involvement of a person in an action. It does not have a separate set of endings but rather requires the use of a special particle coupled with the regular verbal forms of the first person singular and the third persons singular, dual and plural.

4.) The *conditional* mood in Slovene is used to express potential events. It is formed with the particle *bi* in combination with the descriptive participle in -l.

**ASPECT**

Verbs in Slovene are classified by aspect. Most are either *imperfective* or *perfective*, with a small number being considered biaspectual. The imperfective aspect denotes actions in progress or actions which are without limit or which are repeated. The perfective aspect denotes a momentary or limited action, i.e. one with a specific
completed result. Additionally, verbs in Slovene form aspectual pairs, the imperfective and perfective partners of which are derived in a number of ways discussed later in this chapter.

VOICE

Voice indicates the relationship between the subject and the action expressed by a the verb. Slovene grammarians traditionally recognize three categories of voice: active, passive (which is limited to past passive participles) and medium (middle).

The active and passive voices subsume the categories of transitive and intransitive. A transitive verb is one which is capable of expressing an action carried from the subject to the object as in the following sentences:

Véra píše pišmo.
'Vera is writing a letter.'

Bérem knjígo.
'I'm reading a book.'

An intransitive verb cannot take a direct object as in the following sentences:

Véra spí.
'Vera is sleeping.'

Híša je goréla dvá dní.
'The house burned for two days.'

Medium (middle) voice refers to actions which return to the person engaging in them. The category includes for the most part reflexive verbs which are discussed later in this chapter in greater detail, e.g.

Máma se umíva.
'Mother washes herself.'

PARTICIPLES

Slovene has five participles:

1.) Slovene has two adverbial participles. They are derived from verbs and are used to describe actions concurrent with the action of the verb of the main clause or which precede that action in time.
2.) Adjectival participles are of two kinds: The first type includes the present and past (passive) participles. They behave as adjectives, i.e. they can modify nouns and are fully declined like other adjectives. The former is an active one, and the latter is a passive one. The descriptive participle in -l is the second type of adjectival participle. It is used in forming the non-present tenses (past and future) and the conditional mood and denotes gender and number only.

ORGANIZATION AND CLASSIFICATION OF VERBS

The morphology of the verb in Slovene has been described by grammarians and linguists in a number of different ways. The approach used here is one which distinguishes infinitive and present tense stems. The infinitive and present tense stems coincide in many verbs, but often they do not. Establishing a basic division between the two stems will help the student to better understand the structure of the Slovene verb, organized on the formal opposition of the infinitive and present tense stems, and to create its various sets of forms.

A Slovene verb will be encountered in a given form which could be the infinitive (the dictionary entry) form, a present tense form, the imperative, or other. For each new verb it is recommended that the student learn the following forms: the infinitive from whose stem one can automatically generate the supine and the past participles, including the descriptive participle in -l; the first person singular and third person plural of the present tense, from one or both of which the imperative and present participles can be generated. Further, it is helpful to understand that verbs consist of several elements, the most basic of which is its root. For example, the root of the infinitive 'to walk'/'to go on foot' hoditi is hod-. (See also p. 131 for nouns derived from this same root.) The root carries a basic meaning, which can be modified by the addition of a prefix as
in ohodíti 'to make one's rounds'. (See p. 91 for a list of verbal prefixes.)

Suffixes may be added after the verbal root. They do not change the basic meaning of the verb. They create a stem which serves as the base onto which endings will be added. For example, in the case of hodíti the infinitive suffix -i- is added to the root hod- creating the stem to which the infinitive ending is added: hod- + -i- + -ti = hodíti. Infinitive suffixes are the following: -#, -a-, -ova-, -i-, -e- and -ni-. (Compare this list to the infinitives presented on p. 65.) Present tense suffixes are the following: -#, -a-, -i-, -e- and -uj-. Reconciling the infinitive and present tense stems is explained in the notes on the present tense conjugation.

Endings may be single, i.e. the infinitive ending, or may come in sets, i.e. those for the various tenses. They are either personal or non-personal. Personal endings, i.e. endings which change according to the subject of the verb, are those which appear in the sections below treating the conjugation of the tense forms and the formation of the imperative. All other endings for Slovene verbs are non-personal and include the infinitive, the supine and all participles. (Adjectival participles indicate gender, but not person.)

**CONJUGATION OF THE PRESENT TENSE**

With the exception of the third person plural, there is a one set of endings for the conjugation of the present tense. The selection of the correct ending of the third person plural is seen on the following chart and is described in the notes. The present tense conjugations are divided into four basic classes. A fifth class includes a number of irregular verbs, and these are treated separately on pp. 89-91. When comparing the four conjugations which follow with the list of infinitives given on p. 67, one may note that the list includes verbs with the
following infinitive suffixes attached to their roots:

-\( \text{-a} \) (dělati, pisáti and molčáti)
-\( \text{-i} \) (mísliti)
-\( \text{-e} \) (vídati and razuméti)
-\( \text{-ni} \) (dvígniti)
-\( \text{-ova} \) (kupováti)
-\( \#\) (něstí, séstí, rečí, čuti, pítí, and prítí).

The number of suffixes to which endings are added in the present tense is smaller (\( \#\), \( \text{-a} \), \( \text{-i} \), \( \text{-e} \), and \( \text{-uj} \)). They behave in a predictable fashion with regard to sets of forms and endings, explained for each category in the notes which follow. Further, only one of three vowels, \( \text{-a} \), \( \text{-i} \) and \( \text{-e} \), may precede the endings of the present tense. The verbs razuméti, mísliti and dělati retain those vowels in both the infinitive and present tense stems, and the present tense endings are added directly to the stems. The verbs molčáti and vídati take the vowel \( \text{-i} \) as their suffix in the present tense and are conjugated like mísliti. The verb dvígniti takes the suffix \( \text{-e} \) as do all remaining verbs in the list above. They have a \( \#\) suffix to which the vowel \( \text{-e} \) is added before the endings:

\[
\begin{align*}
\text{něstí} & \sim \text{nes\#-} + \text{-e} \\
\text{rečí} & \sim \text{reč\#-} + \text{-e} - \text{(root = rek-)} \\
\text{séstí} & \sim \text{ses\#-} \langle \text{sed\#-} + \text{-e} \\
\text{pisáti} & \sim \text{pis\#-} \rightarrow \text{piš\#-} + \text{-e} \\
\text{prítí} & \sim \text{prid\#-} + \text{-e} \\
\text{kupováti} & \sim \text{kupuj\#-} + \text{-e} \\
\text{čutí} & \sim \text{čuj\#-} + \text{-e} \\
\text{pítí} & \sim \text{pij\#-} + \text{-e}
\end{align*}
\]

### Notes on the Present Tense Conjugation

1. Verbs of the type délati and mísliti are among the most common types of verbs encountered in Slovene. As can be seen above, the vowel, if any, of the infinitive suffix is not a reliable guide for the vowel to which the present tense verbal endings are to be added. That is the reason why the student is encouraged to learn each verb in its infinitive form.
tive form (the form in which it is listed in
dictionaries), the first person singular and
the third person plural. The latter is also
necessary because of the variants often found
here (see footnote 8. below). The chart below
summarizes the infinitive and present tense
suffixes and is followed by notes which will
provide hints on reconciling the choice of
the vowel to be used in the conjugation of
the present tense:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

2. (a) As can be seen, verbs which have an -a- in the stem of the infinitive require special attention from the learner. The vast majority of them retain that -a- in the present tense and are conjugated like délati. It should be noted that verbs in this class always add a -j- to their stem when used to create other forms derived from the present stem (e.g. the imperative and active participles):

dela- > delaj-.

(b) A number of verbs with an infinitive in -ati, always preceded by the soft consonants -ž-, -ž- or -č-, take the vowel -i- in the present tense, e.g.

'to hear' slíšatí ~ slíším ~ slíšíjo
'to lie' ležatí ~ ležím ~ ležíjo
'to be silent' molčatí ~ molčím ~ molčíjo

The presence of a soft consonant does not always mean that the verb behaves as those noted above. Some of them are also conjugated like délati, e.g.

'to pay' pláčatí ~ pláčam ~ pláčajo
'to end' končatí ~ končám ~ končájo
Grammar

(c) A significant group of verbs with an -a- in the infinitive stem display an alternation of the root consonant (see consonant alternations on pp. 20-21) in all forms of the present tense. Such verbs take the vowel -e- in the present tense, e.g.

'to write' pisáti ~ píšem ~ píšejo
'to seek' iskáti ~ isčem ~ isčejo

Included here also are the verbs:
'to lead' peljáti ~ péljem ~ péljejo
'to call' klicáti ~ kličem ~ kličejo
'to take' jemáti ~ jemljem ~ jemljejo

(d) Verbs whose infinitive ends in -ovati (or -evati) are conjugated like kupováti, i.e. the -ova/-eva- suffix of the infinitive contracts to form a present tense suffix in -uj-, and the vowel of the present tense is -e-. A very small number of other verbs which have the vowel -i- or -u- before the infinitive ending -ti also have a present tense stem ending in -j-. They belong to this category as well and include the verbs:

'to drink' pítí ~ píjem ~ píjejo
'to hear' čúti ~ čújem ~ čújejo

3. Most verbs which have an -i- in the infinitive stem retain that -i- in the present tense and are conjugated like mísliti, e.g.

'to praise' hvalíti ~ hválim ~ hválio
'to speak' govoríti ~ govorím ~ govorijo
'to exclude' izkljúčiti ~ izkljúčim ~ izkljúčijo

[Note: See 2 (d) above for the conjugation of pítí.]

4. (a) Verbs with an -e- in the infinitive stem take the vowel -i- or -e- in the present tense and must be learned individually. The group of verbs which take the vowel -i- in the present includes:

'to see' videti ~ vidím ~ vídijo
'to live' živéti ~ živím ~ živijo
'to burn' goréti ~ gorím ~ goríjo
'to sit' sedéti ~ sedím ~ sedíjo

(b) To the group of verbs which take the vowel -e- in the present tense belong the verbs:
'to understand' razuméti ~ razúmem ~ razúmejo
'to be allowed' sméti ~ smém ~ sméjo

5. In verbs with an infinitive suffix in -ni- that suffix is replaced by -ne- in the present tense, e.g.
'to lift' dvígniti ~ dvígnem ~ dvígnejo
'to set out' kreníti ~ kréñem ~ krénejo

6. (a) Verbs with a -#- stem in both the infinitive and present tense such as něsti take the vowel -e- as a suffix in the present tense. [Note: In the absence of a vowel, the root and the stem of the infinitive are the same]. The infinitive ending is added directly to the final consonant of the root, as is the vowel -e- of the present tense.
(In the case of 'to sit down' sésti ~ sédem ~ sédejo the alternation of s ~ d between the infinitive and the present tense and participle in -l (sédel) is exceptional and is not found among the consonant alternations given on pp. 20-21. Such information is normally provided in dictionaries.)

(b) All verbs whose infinitives end in -či belong here. Their present tense forms have either -č- or -ž- throughout their conjugations. The root consonant of those verbs is either a -k- or a -g-. Although not apparent from the infinitive, the descriptve participle in -l- will reveal the root consonant. Alternatively, one may be guided by the fact that those with a -č- in the present tense have a root in -k-, and those with -ž- have a root in -g-, e.g.
'to lie down' léči ~ léžem ~ légel
Some verbs display the -k- or -g- in alternate forms for the third person plural, e.g. 'to say' rěči ~ rěčem ~ rěčej/o/rekó ~ rěkel. (See also the following section on past and future tenses.)

[Note: The verb môči does not follow the preceding pattern. It has a special conjugation. See p. 90.]

7. There is a mixed group of verbs in common use whose stem present tense stem cannot be predicted on the basis of information provided in the preceding analysis. Their conjugations must be learned individually.

(a) The following verbs take the vowel -e- in the present tense:
- 'to read' bráti ~ běrem ~ běrejo
- 'to select' izbráti~ izběrem~ izběrejo
- 'to arrive' prítí ~ prídem ~ prídejo
- 'to begin' začetí ~ začněm ~ začnej/o/začnó
- 'to take' vzetí ~ vzámem ~ vzámejo
- 'to sing' pěti ~ půjem ~ půjejo

(b) The following verbs take the vowel -i- in the present tense:
- 'to fear' báti se~ bojím se~ bojíjo se
- 'to sleep' spáti~ spím~ spíjo
- 'to stand' státi~ stojím~ stojíjo

(c) See pp. 89-90 for the special conjugations of the following verbs:
- bítí 'to be'
- jísti 'to eat'
- dáti 'to give'
- věděti 'to know'
- íti 'to go'
- iměti 'to have'
- hotěti 'to want'
- môči 'to be able'.

8. (a) A number of verbs of the type něstí 'to lead' have short alternate forms in the third person plural: něsejo / nesó. Similarly: 'to
begin' začeti ~ začnějo / začnó. The short form is always stressed on the final syllable.

(b) Likewise, a few verbs whose ending is normally a stressed -íjo in the third person plural (of the mísliti type of conjugation) may take an alternate ending, also stressed, in -é. The longer forms are preferred in the contemporary spoken language, while the short forms may be found in older literature or in dialects. Examples:
'to hurry' hitéti ~ hitíjo / hité
'to lie' ležáti ~ ležíjo / ležé
'to live' živéti ~ živíjo / živé

PAST AND FUTURE TENSES

FORMATION OF THE DESCRIPTIVE PARTICIPLE IN -l

The past and future tenses in Slovene are compound formations consisting of an auxiliary verb plus the descriptive participle in -l. That participle is coupled with the present tense of the verb bíti 'to be' in order to express a past tense and with the future tense of the same verb to express the future. When functioning as an auxiliary, forms of the verb 'to be' are unstressed. Its conjugations are presented in the charts which follow and on p. 89. The participle expresses gender and number, while the auxiliary verb denotes person and tense. The descriptive participle in -l is formed from the infinitive stem by the simple addition of the -l to the final vowel of the stem, e.g. 'to speak' govor+-i+-ti = govorníti, likewise govor+-i+-l = govorníl, govornila, etc. Verbs with an infinitive stem in -#- ending in a consonant (including all verbs with the infinitive ending -či) add an -e- [a] before the -l of the descriptive participle for the masculine singular form only. The following list provides the masculine and feminine descriptive participle in -l of all verbs shown in the analysis in note 1. on pp. 72-74:
dělati ~ dělal / dělala  
pisáti ~ písal / pisála  
molčáti ~ molčal / molčala  
kupováti ~ kupoval / kupovala  
mísliti ~ míslil / míslila  
dvígniti ~ dvígnil / dvígnila  
vídeti ~ videl / videla  
razuméti ~ razumel / razuměla  
píti ~ píl / píla  
čúti ~ čul / čula  
něsti ~ něsel / něsla  
sěsti ~ sédel / sédla  
rěči ~ rěkel / rěkla

Note that, in the verb sěsti the -l is added to the root -d- (see note 6.(a) above) with an -e- [ə] inserted in the masculine form. Likewise, verbs in -či have in their root either -k- or -g- (the root consonant of each of these verbs before alternation) which is used to form the descriptive participle as seen in rěči and léči. (see note in 6.(b) above)

Verbs

FUTURE TENSE

'to speak' masculine feminine neuter

singular
1. bom govóril govorila govorilo
2. boš " " "
3. bo " " "
dual
1. bova govorila govorili govorili
2. - 3. bosta " " "
plural
1. bomo govorili govorile govorila
2. boste " " "
3. bodo " " "

IMPERATIVE

Commands and strong requests in Slovene may be issued in the second person singular, dual and plural, as well as in the first person dual and plural. The basic form of the imperative is that of the second person singular. It is formed from the present tense stem. There are two possible suffixes, -j- or -i-, to which the following endings are added, as seen below in the verbs délati 'to work' and nèsti 'to carry':

-# 2. délaj nèsi
   '(you) work / carry!'
   dual
-va 1. délajva nesìva
   'let's you and I work / carry!'
-ta 2. délajta nesità
   'you two work / carry!'
-plural
-mo 1. délajmo nesìmo
   'let's work / carry!'
-te 2. délajte nesíte
   '(you) work / carry!'
Those verbs with a present tense stem in -a- (dělati) retain that -a- and add the suffix -j- to the stem (refer to note 2 (a) on p. 74), e.g. dělaj-. This creates a stem for the imperative to which the other endings are added in the first and second persons dual plural. Note that the stem of dělaj is now equal to that of the verbs kupováti ~ kupúj- (p. 74), čúti ~ čúj, and píti ~ pij- (note 2 (d), p. 75). The vowel -i- is used as a suffix to create the stem, i.e. the basic form, of the imperative for all other verbs, i.e. those with present tense suffixes in -#- or -i- (i.e. those verbs which take the vowels -i- or -e- in the present tense conjugation). This includes all verbs of the type mís- liti, viděti and molčáti, as well as verbs of the type něšti, sěšti, rěči, príti, dvígnití, razuméti and píšáti (See notes 2.-7. on pp. 74-77.). The vowel -i- is added directly to the final consonant of present tense stem. [Note: Verbs with an infinitive in -čí have a special alternation of the root consonant: -g->z- and -k->c-.]

samples of imperatives

infinitive / 1st sing. imperative
'to read' čítati / čítam čítaj
'to work' dělati / dělam dělaj

and

'host buy' kupováti / kupújem kupúj
'to hear' čúti / čújem čúj
'to drink' píti / píjem píj
'to sing' pěti / pôjem pôj

but

infinitive / 1st sing. imperative
'to lift' dvígniti / dvígnem dvígni
'to speak' govorití / govorím govôri
'to lie down' lěči / lěžem lézi [note!]
'to be silent' molčáti / molčím molči
'to carry' něšti / něsem něši
'to write' pisáti / píšem píši
'to arrive' príti / prídem pridi
'to understand' razuméti / razúmem razúmi
Slovene has a category of mood, complementing the imperative, called the optative which exhorts the listener(s) or expresses the desirability of an event which may be rendered in English by words such as 'let, 'should' and 'may'. The optative pattern uses existing sets of verbal forms, namely the present tense in the first person singular and in the third person singular, dual and plural before which the particle naj is placed:

**singular**

1. naj délam 'let me work'/'I should work'
3. naj déla 'let him/her/it work'
   dual and plural
3. naj délata 'let the two of them work'
3. naj délajo 'let them work'

**examples**

Naj ti pošljem prepis?
'Should I send you a copy?'
Velel je, naj gredó.
'He ordered them to go.'
Naj bó!
'Let it be!'
Naj počíva v míru!
'May he rest in peace!'
Kaj naj storim?
'What should I do?'
Rēci mu, naj pride!
'Tell him that he should come!'
Naj stáne, kár hőče!
'Let is cost what it may!'
Naj ljudi rečejo, kár hőčejo!
'Let people say what they will!'
Nisem vėdel, ali naj se smējem ali jōčem.
'I didn't know whether to laugh or cry!'
CONSTRUCTIVE

There are two conditional patterns in Slovene. They are formed using the descriptive participle in \(-l\) and the simple addition of the particle \(bi\). In compound sentences both the main and the subordinate clauses require that the verb appear in the conditional form.

PRESENT CONDITIONAL: The particle \(bi\) is accompanied by the descriptive participle in \(-l\). (See p. 78 for its formation.)

\(Bi\ mi lahko pomagali?\)

'Would you (please) help me?'

\(Bi\ mi dalj ogenj?\)

'Would you give me a light?'

\(Ne\ da\ bi jaz vedel.\)

'Not as far as I (would) know.'

\(Jaz\ bi ssel, ko bi utegnil.\)

'I would go if I had time.'

\(Ce\ bi vedel, bi ti povedal.\)

'If I knew, I would tell you.'

\(Ko\ bi mislil na nevarnost, bi vojak v bitki znorel.\)

'If he thought about the danger, a soldier would become insane in battle.'

\(Jaz\ bi delal, ce bi me kdo planal.\)

'I would work if someone would pay me.'

\(Ona\ bi sela na Brzje, ce bi jo tij zapeljal z avtom.\)

'She would go to Brezje if you would drive her.'

\(Mi ne bi dvignili cen, ce bi ne bili proizvodni stroški takoj visoki.\)

'We wouldn't raise prices if production costs weren't so high.'

PAST CONDITIONAL: The participle \(bi\) is accompanied by the descriptive participle in \(-l\) of the verb 'to be' (bi bil) plus the descriptive participle in \(-l\) of the action under question. The following sentences illustrate the past conditional, but the learner is cautioned that they are stilted and belong to the literary language.
In conversational Slovene the present conditional would more likely be used:

Če ne bi bil zamúdil tístega letála, bi se bil z drugimi pótniki vred smetno ponesrečil.
'If he had not missed that plane, he would have been killed with the other passengers.'

Ko bi vedel, kakó mocna je slivovka, bi je ne bil spil cel kozarec na dušek in se ne bi bil takó osměšil.
'If I had known how strong the plum brandy was, I would not have drunk a whole glass in one gulp and made such an ass of myself.'

PARTICIPLES

As seen above, Slovene has a descriptive participle in -l used to form compound tenses (past and future) and the conditional mood. Beyond that there are two adverbial and two adjectival participles. All five are part of both the written language and of the educated style of spoken Slovene. The two adjectival participles, the present (active) and the (past) passive, behave in all respects like adjectives, i.e. they agree in gender, case and number with the modified noun. In the spoken language adjectival participles are frequently used as simple adjectives, e.g.

Mój brat je molčec človek.
'My brother is a reticent (quiet) person.' [literally 'remaining silent']

Rečeno, storjeno.
'(No sooner) said (than) done.'

Česta je zapita.
'The road is closed.'

The two adverbial participles behave as other adverbs in Slovene, with the present adverbial participle describing simultaneous actions, and the past adverbial participle describing antece-
dent actions. Basic rules for the formation of adjectival and adverbial participles are provided below.

ADVERBIAL PARTICIPLES: Slovene has two adverbial participles, one with the ending -e/-je and the other with the ending -vši/-ši. They modify the main verb of the given sentence.

The participle in -e/-je denotes an action simultaneous with the main verb of the sentence. It is formed from imperfective verbs by adding the vowel -e to the final consonant of the present tense stem (stems in -š-, -i- and -e-). As was the case in the formation of the imperative, verbs with a present tense stem in -a- (dělati) add an -j- to their stem (p. 80) to which the ending -e is added.

(See below for stems in -uj-.)

examples
molčati ~ molčím ~ molčé 'being silent'
Molče so šli v smrti.
'They went to their death silently.'
igráti ~ igrám ~ igráje 'playing'
Tô bom igráje narédl v pôl úre.
'I'll complete that in half an hour
(playing) [= 'It's child's play!']
séstì ~ sédem ~ sedé 'sitting'
Tô dělo lahko oprávilaš sedé.
'You can do that while sitting.'

Other examples include:
stojé from státi ~ stojím 'to stand'
gredé from íti ~ grém 'to go'
ležé from ležáti ~ ležím 'to lie'
kupováje (kupuje in an older literary form)
from kupováti ~ kupujem 'to buy'

[Note: In the last example there is a tendency to derive the participle for this class of verbs from the infinitive stem -ova- by the addition of -j- + -e rather than from the present tense stem -uj- so that their formation is like that for dělati.]
The participle in -vši/-ši denotes an antecedent action, i.e. one completed before the action of the main verb of the sentence and is derived from perfective verbs. It is limited in use primarily to the literary language. It is formed from the infinitive stem to which the ending -vši is added. In the case of verbs without a vowel in the infinitive stem, i.e. those with a -š- stem (including those verbs whose infinitive is -či), the ending -ši is added directly to the root/stem consonant:

pozabíti ~ pozábil ~ pozabívši  
'having forgotten'
dvígniti ~ dvígnil ~ dvígnivši  
'having raised'

but
rěči ~ rékel ~ rěkši 'having said'
sěsti ~ sédlel ~ sédši 'having sat down'

examples
Sédši k mízi, so začeli jést.
'Having sat down at the table, they began to eat.'
Pozabívši, da ní domá, je záčela preuréjati sobo.
'Forgetting [=Having forgotten] that she wasn't home, she began changing around the room.'
«Zdrávo» je rěkla Mílica, vstopívši v hášo.
"Hello," said Milica, entering [=having entered] the house.'

ADJECTIVAL PARTICIPLES: There are two adjectival participles in Slovene, a present (active) one formed from imperfective verbs and a past (passive) one formed from perfective verbs. Both behave like adjectives and can be fully declined. The rules for forming adjectival participles are somewhat complex, and there are a number of exceptions.

The present participle is formed from the present tense stem. Its ending is -č which is added to the vowel -o- or -e-, the selection of which is described below:
1. (a) Verbs with present tense stems in -uj- and -a- (verbs of the type délati which added -j- in the imperative and adverbial participle in -e/-je, do so here again) take the ending -őč. [Note: It will help to compare these forms to the third person plural.]

délati ~ délajo ~ delajóč 'working'
čákati ~ čákajo ~ čakajóč 'waiting'
kupováti ~ kupujejo ~ kupujóč 'buying'
potováti ~ potujejo ~ potujóč 'travelling'

(b) Verbs which have a present tense stem in -ę or -e-, i.e. those which use the vowel -e- in the present tense, have a third person plural ending in -ejo or -ę. They also take the ending -őč, adding it to the final consonant of the stem.
pisáti ~ píšejo ~ pišóč 'writing'
něsti ~ něsejo/nesó ~ nesóč 'carrying'
bráti ~ běrejo/beró ~ beróč 'reading'
rěči ~ rěčejo/rekó ~ rekóč 'saying'

2. Verbs with a present tense stem in -i- keep that vowel throughout the present tense and have a third person plural ending in -ijo or -ę. They take the ending -őč, adding it to the final consonant of the stem.
mísliti ~ míslijo ~ mísleč 'thinking'
čutíti ~ čútijo ~ čutéč 'feeling'
molčáti ~ molčájo/molčé ~ molčéč 'being silent'
ležáti ~ ležájo/ležé ~ ležéč 'lying'
sedéti ~ sedíjo ~ sedéč 'sitting'

The past passive participle is formed from the infinitive stem of transitive verbs, to which an -n or -t is added. The vast majority of verbs with past passive participles belong to the perfective aspect, but a number in common use are imperfective (e.g. kúhan and pečen below).
1. Verbs which have an infinitive stem in -a- or -ova- add -n directly to the -a- of the stem, e.g.

napísáti ~ napísan \textit{'written'}
kúhati ~ kúhan \textit{'cooked'}
kupováti ~ kupován \textit{'purchased'}
poškodováti ~ poškodován \textit{'damaged'}
pláčáti ~ pláčan \textit{'paid'}
razprodáti ~ razprodán \textit{'sold out'}
zdělati ~ zdělan \textit{'tired'/'worn out'}

2. (a) Those verbs with an infinitive stem in -i- take the ending -en added to the final consonant of the stem. If that consonant is one which can alternate as described on pp. 20-21, then that alternation will occur before the -en is added.

hvaliti ~ hváljen \textit{'praised'}
naváditi(se) ~ navájen \textit{'accustomed to'}
oženiti ~ oženjen \textit{'married'}
ponositi ~ ponošen \textit{'worn out'}
popraviti ~ popravljjen \textit{'fixed'}
rániti ~ ránjen \textit{'wounded'}
roditi ~ rôjen \textit{'born'}
uloviti ~ ulovljen \textit{'caught'}
urediti ~ urejên \textit{'arranged'}
uvoziti ~ uvóžen \textit{'imported'}
zapustiti ~ zapuščen \textit{'abandoned'}

[Note: The soft consonants -č-, -ž- and -š- are the result of earlier alternations and cannot alternate further. Verbs with such consonants are included in this group:
izkljúčiti ~ izkljúčen \textit{'excluded'}]

(b) Verbs which have an infinitive stem in -ž- or -e- (including verbs with an infinitive in -či) also add the ending -en directly to the final consonant of the stem but without alternation (the first example being an exception).
pěči ~ pečèn \textit{'baked' (note!)}
plěsti ~ pletên \textit{'knitted'}
preněsti ~ prenesên \textit{'transferred'}
Grammar

Verbs

vědětī ~ věden 'visible'
želětī ~ želēn 'desired'

3. The ending -t occurs in a limited number of verbs in which the infinitive ending -ti is preceded by -i-, -e- or -u- and whose present tense has the ending -em or -jem (as opposed to -im) in the 1st person singular.
razbítī ~ razbíjem ~ razbít 'broken'
skrítī ~ skríjem ~ skrít 'hidden'
obūtī ~ obújem ~ obūt 'shod'
začětī ~ začněm ~ začět 'begun'

SPECIAL CONJUGATIONS

Listed below are the conjugations for several very common verbs in Slovene. Each of them has its own special features, and the student is advised to learn each verb individually:

būti 'to be'

<table>
<thead>
<tr>
<th>singular</th>
<th>present</th>
<th>negated</th>
<th>future</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>sèm</td>
<td>nísem</td>
<td>bóm*</td>
</tr>
<tr>
<td>2.</td>
<td>si</td>
<td>nísi</td>
<td>bòš</td>
</tr>
<tr>
<td>3.</td>
<td>jè</td>
<td>ní</td>
<td>bò</td>
</tr>
<tr>
<td>dual</td>
<td>svà</td>
<td>nísva</td>
<td>bòva</td>
</tr>
<tr>
<td>1. - 3.</td>
<td>stà</td>
<td>nísta</td>
<td>bòsta</td>
</tr>
<tr>
<td>plural</td>
<td>smò</td>
<td>nísmo</td>
<td>bòmo</td>
</tr>
<tr>
<td>2.</td>
<td>stè</td>
<td>níste</td>
<td>bòste</td>
</tr>
<tr>
<td>3.</td>
<td>sò</td>
<td>níso</td>
<td>bòdo</td>
</tr>
<tr>
<td>-l participle</td>
<td>bíl, bilà, bilò, bilì</td>
<td></td>
<td></td>
</tr>
<tr>
<td>imperative</td>
<td>bòdi</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

* In addition, one may also encounter the more archaic forms bòdem, bòdeš, bòdé, bòdeva, bòdeta, bòdemo, bòdete, bòdejo as well as the colloquial third person plural future: bòjo.
<table>
<thead>
<tr>
<th>Verb</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>jísti</td>
<td>'to eat'</td>
</tr>
<tr>
<td>dáti</td>
<td>'to give'</td>
</tr>
<tr>
<td>védeti</td>
<td>'to know'</td>
</tr>
<tr>
<td>íti</td>
<td>'to go'</td>
</tr>
</tbody>
</table>

**Singular**

1. jém   dám    vém    grém
2. jěš   dáš    věš    grěš
3. jé    dá     vé     gré

**Dual**

1. jěva  dáva   véva   gréva
2. - 3. jěsta dásta vésta grěsta

**Plural**

1. jémo  dámo   vémo   grémo
2. jéste dáste věste gréste
3. jéjo  dájo   vějo   grějo
   or    or     or     or
   jedo  dadjo  vedjo  gredo

**-l Participle**

jédel/jédla dál/dála védel/védela šél/šlè
   or    or

**Imperative**

jěj     daj     védi    pójdi

The followings verbs also display peculiarities in their conjugations, and two of them have special negative forms as well:

<table>
<thead>
<tr>
<th>Verb</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>iměti</td>
<td>'to have'</td>
</tr>
<tr>
<td>hotěti</td>
<td>'to want'</td>
</tr>
<tr>
<td>můči</td>
<td>'to be able'</td>
</tr>
</tbody>
</table>

**Singular**

1. imám (nímam) hóčem* (nóčem) mórem
2. imáš (nímaš) hóčeš (nóčeš) móreš
3. imá (níma) hóče (nóče) móre

**Dual**

1. imáva (nímava) hóčeva (nóčeva) móreva
2. - 3. imáta (nímata) hóčeta (nóčeta) móreta

**Plural**

1. imámo (nímamo) hóčemo (nóčemo) móremo
2. imáte (nímate) hóčete (nóčete) mórete
3. imájo (nímajo) hóčejo (nóčejo) mórejo

**-l Participle**

iměl/iméla hôtel/hotěla mógel/môglà

**Imperative**

iměj     hôti      -------
* In addition, one may also encounter the non-standard colloquial short forms čem, čes, če, čeva, četa, čemo, čete, čejo.

[NOTE: Two additional special imperatives: poglej from pogledati 'to look (at)' vzemi from vzeti 'to take'.]

COMMENTS ON THE USE OF ASPECTS IN SLOVENE

As noted earlier, verbs in Slovene come in pairs, one partner of which is imperfective and one perfective. These aspects may occur in any of the tenses. Perfective verbs used in the present tense, however, often imply an intended future action (see examples on pp. 93-94). Verbs in the imperfective aspect denote actions which are unlimited and which may express one or more of the following ideas: an action in progress for some length of time, an action which is repeated or habitual (i.e., occurs frequently), or an action which is not yet completed. Perfective verbs, on the other hand, denote actions which are limited and which have a single termination, i.e. the beginning or end of an action, or an action which is instantaneous, momentary or whose conclusion is expected or foreseen. There are a few verbs which occur in one or the other aspect only, a few which are biaxpectual, but the typical verb in Slovene is paired by aspect.

An unprefixd imperfective verb is considered the basic form of a verb. Its perfective partner is typically formed from it by the addition of a prefix. For example, the verb pisati 'to write' in its prefixed form napisati means 'to finish writing'. Among the commonly used verbal prefixes we find the following:

- do-, iz-, na-, o/ob-, od-, po-
- pod-, pre-, pred-, pri-, pro-
- raz-, s-, u-, v-, vz-, z-, za-

Many of the preceding prefixes are derived from prepositions (compare the lists appearing on pp. 60-64). Some of these prefixes carry more than one meaning. The learner will come to recognize them and their meanings with greater
familiarity with the language. In addition to its basic prefixed form napisáti, the verb pisáti is found in the prefixed perfective forms listed below. [Note: The verb pisáti and its prefixed forms may be correctly used with the stress on the -a- or -i-, e.g. pisáti OR písati.]

izpisáti 'to copy out'
[to write a text out of another]
opisáti 'to describe'
[to write about]
odpisáti 'to reply in writing'
[to write from X to Y]
popisáti 'to inventory'
[to write bits of information]
podpisáti 'to sign'
[to write under, at the bottom of]
prepisáti 'to copy'
[to transfer across in writing]
predpisáti 'to prescribe'
[to write in front of]
pripisáti 'to annotate'
[to attach something in writing]
razpisáti 'to invite application'
[to write about detailing]
spisáti 'to compose'
[to put together in writing]
zapisáti 'to jot down'
[the writing process is done and over, i.e. it is behind you]

In addition to prefixation, there are other ways in which pairs of imperfective/perfective verbs are formed in Slovene. In many cases verbs display a change within the root or have suffixes in order to distinguish aspect:

<table>
<thead>
<tr>
<th>Imperfective</th>
<th>Perfective</th>
</tr>
</thead>
<tbody>
<tr>
<td>dobívati</td>
<td>dobíti</td>
</tr>
<tr>
<td>kupováti</td>
<td>kupiti</td>
</tr>
<tr>
<td>obráčati</td>
<td>obrniťi</td>
</tr>
<tr>
<td>odlóčati</td>
<td>odlociti</td>
</tr>
<tr>
<td>ográžati</td>
<td>ogroziti</td>
</tr>
<tr>
<td>ostájati</td>
<td>ostati</td>
</tr>
<tr>
<td>pozdrávljati</td>
<td>pozdravití</td>
</tr>
<tr>
<td>prežívljati</td>
<td>preživeti</td>
</tr>
</tbody>
</table>
In a limited number of cases an entirely different root is used to form a pair of imperfective/perfective verbs, e.g. **govoríti 'to speak' ~ rěči 'to say'** and **jemáti 'to take' ~ vzěti 'to take'.**

**Sentences with imperfective and perfective verbs:**

**Imperfective:**

Nína je pisála písmo.

'Nina was writing a letter.'

Grém nakupováv v trgovíno.

'I'm going shopping.'

Káj boš délal?

'What will you be doing?'

Lahkó pláčam.

'I can pay.'

Ne odpíraj tůjih písem!

'Don't open other people's mail!'

Zdàj ga podpisújem.

'I'm signing it now.'

Ali ne mórete gradíti?

'Can't you build?'

Cestítali so drugh drúgemu.

'They congratulated one another.'

Olga ne běre velíko.

'Olga doesn't read much.'

Níma smísla čákati.

'There's no sense in waiting.'

Kóliko čása stojí vlák?

'How long does the train stay (here),'

Tó mi boš pláčal!

'You'll pay (me) for that!'

Kdór ljúbi, tá kaznúje.

'Spare the rod and spoil the child.'

(lit. = 'He who loves, that one punishes.')

**Perfective:**

Nína je napisála písmo.

'Nina finished writing the letter.'

Knjígo grém kúpit.

'I'm going to buy a book.'
Jóže je pогlédal revíje.
'Joe looked at the magazines.'
Tréba je/bo podpisáti formulár.
'The form has to be signed.'
Pridem zjútraj.
'I'm coming (shall come) in the morning.'
Sóla se začnè 1. októbra.
'School opens (will begin) on Oct. 1.'
Razbesnél se je nad menój.
'He blew up at me.'
Zberíte se!
'Pull yourself together!' Narédil sem se, kot da sem jézen.
'I pretended to be angry.'
Obíšite me jútri.
'Visit me tommorrow.'
Káj je postálo on?
'What has become of him?'
Vrátá se níso hotéla odpréti.
'The door wouldn't [=didn't want to] open.'
Ostánete dólgo v Slovéniji?
'Will you (do you intend to) stay long in Slovenia?'

[NOTE: Students who undertake the study of Slovene already knowing another Slavic language should pay particular attention to the use of aspects. Slovene, like Serbo-Croatian, allows the use of the perfective aspect in the present tense. Russian, on the other hand, restricts the use of the perfective aspect to verbal actions in the past and future denoting actions already completed or whose termination is foreseen. The perfective may not be used for a present tense action in Russian.]

TENSE SEQUENCE IN SLOVENE

The learner is cautioned to take note of the sequence of verbal tenses in compound sentences when translating from or into Slovene. There are significant differences between English and Slovene in many cases. Compare, for instance, the following sentences and their translations:
Rékel je, da o tém ničesar ne vè.
'He said that he didn't know anything about it.'

Analysis: Whereas both verbs in English occur in the past tense, the sequence in Slovene is different. While the first verb is in the past tense, the second is in the present tense, i.e. there is something that the speaker does not know at the time he spoke.

Lahkó mu oménim tvôje težáve, ko ga bom videl.
'I can mention your difficulties to him when I see him.'

Analysis: In the English translation the verbs occur in the present tense. (One might also say 'I'll mention', i.e. future tense.) In Slovene the first verb is in the perfective present with an implication of a future act, and it refers to a specific act, while the second verb occurs in the imperfective future without specifying when it is that 'I will be seeing him'.

Ko boš dobil to pismo, bóm že v Berlínu.
'When you get that letter I'll already be in Berlin.'

Analysis: Similar to the preceding sentence, English uses the present tense in order to suggest a future action in the first clause, while in Slovene the future is used. In the second clause both languages use the future.

Tône ní vedel, ali še živi môja máti.
'Tone did not know whether (or not) my mother was still alive.'

Analysis: As in the first example English places both verbs in the past tense creating an ambiguous statement concerning the state of health of the speaker's mother. In Slovene the verb of the first clause records an action in the past. Whether or not the mother of the speaker is alive at the time the discussion takes place is a fact of which Tone was unaware.
He hoped that he would catch the last bus home.'

Analysis: In English 'would' is used in place of 'will' in compound sentences such as the preceding one. The use of 'would' in such a case is not related to the conditional mood discussed earlier. The question here is not one of conditions or potential events, rather the person was thinking and hoping at that time 'I will catch the bus'. Compare the preceding to the sentence on p. 83 Če bi vědel, bi ti povědal. 'If I knew / were to know (but I do not), I would tell you (but I can't, since I do not know)' in which conditions would have to be fulfilled in order for both events to occur.

Otròk ní vědel, káj se z njím godí. 'The child didn't know what was happening to him.'

Otròk ní vědel, káj se je z njím godílo. 'The child didn't know what had happened to him.'

Analysis: The first sentence above is like the first example in this group. English uses the past tense for both clauses, while in Slovene it is clear that at the time the action is taking place, the child did not know its meaning. In the second sentence the child did not know the meaning of an incident which took place at an earlier time.

VERBS WITH THE REFLEXIVE PRONOUNS SE AND SI

The short forms (clitics) of the reflexive pronoun sèbe 'oneself', accusative se and dative si (see p. 47), may be used in combination with a large number of verbs. The presence of the pronoun produces a variety of different meanings.
Uses of the accusative reflexive pronoun se:

1. When used with transitive verbs, the presence of se denotes an action directed back to the subject, e.g.
Máma umíva otrôka.
'Mother washes the child.'
vs.
Máma se umíva.
'Mother washes herself.'
The preceding category includes such verbs as:
bríti se 'to shave (oneself)'
obláčiti se 'to dress (oneself)'
práskati se 'to scratch (oneself)'

2. The use of se with a transitive verb often serves to create a passive meaning for the verb, e.g.
Teškó ga je prepríčati.
'It's hard to convince him.'
vs.
Prepríčal sem se na lástne očí.
'I saw it with my own eyes.'
(i.e. 'I was convinced by my own eyes.')
Likewise:
pěčí se 'to be baked'
raníti se 'to be wounded'
uporábljati se 'to be used'

3. The use of se may signify a reciprocal action between two or more persons, e.g.
Ljúbim Níno.
'I love Nina.' [transitive verb]
vs.
Onádva sta se ljubíla.
'They loved one another.'
Likewise:
pozdrávljati se 'to exchange mutual greetings'
razuméti se 'to understand one another'
sréčati se 'to meet one another'
razíti se
	'to separate/go one's way'

4. There are verbs with which the reflexive pronoun se must always be used. They are intransitive. (The se carries with it no inherent self directed, passive or reciprocal meaning):
Ne bójte se! (from báti se)
	'Don't be afraid!'
Likewise:
čúditi se 'to wonder'
jókati se 'to cry'
pocutíti se 'to feel'
smejáti se 'to laugh'
spómníti se 'to remember'

5. Some verbs are combined with se in the third person singular to convey impersonal constructions, i.e. those in which the subject is not named:
Ne vé se, kdáj bodo prišli.
	'Nobody knows when they will arrive.'
	(i.e. 'It is not known...')
	vs.
Jàz tó vém. 'I know that.'
Likewise:
govorí se 'it is rumored'
míslí se 'it is thought'
slíši se '(something) is heard'

The dative reflexive si pronoun denotes an action performed for the benefit of the subject of the verb. Only a few verbs are obligatorily used with si. There is a growing preference for the se form. For instance, one finds both úpatí si and úpatí se 'to dare' and oddahníti si and oddahníti se 'to recover'. Verbs accompanied by si in common use include:
mísliti si 'to imagine'
ogledováti si 'to sightsee'
pomagáti si 'to help oneself'/'to find a way'
zapómníti si 'to keep in mind'
želéti si 'to wish for oneself'
NOTES ON VERBAL STRESS

1. (a) As stated earlier Slovene recognizes three basic stress patterns: A and B which are non-mobile on the root and ending respectively; a mobile C stress pattern. The vast majority of Slovene verbs have a non-mobile A pattern in which the stress falls on the root in the infinitive, present tense, imperative, participle in -l, supine and past participle. It includes such common verbs as:

mísliti 'to think'
dvígniti 'to raise'
rézati 'to cut'
délati 'to work'
sésti 'to sit down'
vérovati 'to believe'
mérítí 'to measure'

(b) The number of verbs which display a non-mobile B stress pattern is considerably smaller. It such verbs the stress falls on the final vowel of the stem before the ending is added in the same forms enumerated above. Note, however, that in the basic form of the imperative (the second person singular) of those verbs which take -i, that -i cannot be stressed, while it is stressed in other forms of the imperative.

Infinitive/1st person Imperative
končáti/končám končáj/končájte 'to end'
kupováti/kupújem kupuj/kupújte 'to buy'
grešíti/greším gréši/grešíte 'to sin'
besnéti/besním běsni/besníte 'to rage'
govoríti/govorím govórí/govoríte 'to speak'

2. In those verbs which display a mobile C stress pattern there is a retraction (moving back) of the stress by one syllable in the present tense, in basic form of the imperative (the second person singular) and in the masculine singular of the descriptive participle in -l.
Verbs

(infinitive, followed by the 1st person, singular and plural imperatives, and the masculine and feminine participle in -l)
'to defend' brániti ~ bráním ~ brání/braňíte ~ bráníl / braňila
'to set out' kreníti ~ kreněm ~ krení/kreníte ~ kreníl / kreníla
'to be silent' molčáti ~ molčím ~ molčí/molčíte ~ molčal / molčála
'to comb' česáti ~ česem ~ čěši/čěšíte ~ čěsal / česála
'to say' rěči ~ rěčem ~ rěci/recíte ~ rékel / rěkla
'to read' bráti ~ běrem ~ běři/beríte ~ brál / brála

NOTE: The verbs rěči and bráti are included above even though they are stressed on the first syllable in the infinitive and present tense. The shift is seen in the second person plural of the imperative. Further, the form molčí with a stressed ending on all forms of the present tense is an exception. A number of other verbs in common use also display the same stress irregularity. They include:
'to run' bežáti ~ bežím
'to hold' držáti ~ držím
'to lie' ležáti ~ ležím and others.

3. Stress for participles:
a.) Stress for the participle in -l is covered in notes 1. and 2. above.

b.) The present adverbial participle in -e is always stressed on the final syllable, e.g. molčé and vedé, and those in -je are stressed on the syllable immediately preceding, e.g. kupováje and deláje.

c.) The past adverbial participle ending in -vši / -ši is stressed on the next to last syllable (the final vowel of the stem of the infinitive), e.g. končávši and dvignívši.
d.) The present adjectival participle in -č is always stressed on the final syllable, e.g. delajoč and mislēč.

e.) The stress of the past adjectival participle normally coincides with the stress of the first person singular, e.g. kūpim ~ kūpljen and rānim ~ rānjen.
MISCELLANEOUS NOTES AND SOME SPECIAL PROBLEMS OF SYNTAX AND GRAMMAR

THE USE OF THE DUAL IN SLOVENE

Slovene recognizes three numbers for nominal, pronominal and adjectival declensions, as well as for verbal conjugations: singular, dual and plural. The dual in Slovene, with one exception, is unique among the Slavic languages and indeed among the major languages of Europe. It is a very old category which had fallen into partial disuse over time. Its continued use, however, was assured in the nineteenth century when Contemporary Standard Slovene was codified, i.e. standardized, becoming the language now used by educated Slovenes and as the literary norm in the mass media and the arts. One hears the dual used in everyday speech on the streets of Ljubljana, while its use in the dialects is less consistent.

As seen in the various charts of declensions presented throughout this text, the dual does not have a complete set of forms for all cases in the nominal and adjectival declensions as do the singular and plural numbers. The nominative and accusative cases are the same, as are the dative and instrumental. The genitive and locative cases coincide with the same case forms of the plural. The dual forms for pronouns is somewhat more developed. In verbal conjugation there is a set of forms for the first person, while the second and third persons share the same form.

The general rule is that the dual is used when referring to two persons or objects. In the case of nouns, the numeral for 'two' or 'both' must appear in order for the dual form to be used. Once having been stated in a given situation, the number need not be mentioned again. (See the first two examples below.) For verbs it is sufficient for the number two to be implied:

102
When parts of the body (eyes, eyebrows, ears, arms, legs, knees, wings, etc.) or objects which normally come in pairs (such as sleeves, socks, gloves, earmuffs) are not specifically referred to by number, the plural is used:

Ušesa me bolé.  "My ears ache."
Očí so mu goréle.  "His eyes burned."
Imám hládne róke.  "I have cold hands."
Rokavíce sem pozábil.  "I forgot my gloves."

but
dvé nógí, môji dvé očési  "two feet", "my two eyes"
Sprejél ponúdbo z obéma rókama.  "He jumped at the offer." [= 'He accepted the offer with both hands. ']
Izgubíla je obé rokavíci.  "She lost both gloves."
Oslepél je na obé očési.  "He became blind in both eyes."

ANIMATE VS. INANIMATE

There are times in Slovene when the speaker must choose between using the accusative or genitive case of a noun depending upon whether that noun refers to a person or animal, i.e. it is animate, or to an inanimate object. The choice arises in connection with transitive verbs requiring a direct object in the accusative case, as well as with prepositions which govern the accusative case. Further, only masculine nouns in the singular are affected by this rule. The accusative case ending for masculine nouns in the singular is identical with
either the nominative or the genitive case, 
while in the dual and plural the nominative, 
genitive and accusative cases of masculine nouns 
each have different endings. Compare the accusa-
tive endings for the words pótnik 'traveller' 
and möhst 'bridge' on p. 26. Neuter nouns are not 
affected, since virtually all of them refer to 
inanimate objects (exceptions: dëte 'child' and 
deklë 'girl').

Nor are feminine nouns affected, since 
feminine declensions in most cases distinguish 
between the nominative, genitive and accusative 
cases in the singular, dual and plural. (Femi-
nine nouns ending in a consonant such as mëš 
'mouse' are an exception. (See p. 27.)

The general rule states that the accusa-
tive ending for masculine nouns in the singular 
is -a, i.e. the same as the genitive ending, if 
the point of reference is animate (a living 
being, person or an animal) and the zero ending 
(-#) if it is inanimate (a non-living object), 
i.e. the same as the nominative case.

Examples

Imám sína.
'I have a son.'
Imám účbenik.
'I have a textbook.'
Stárši skrbiýo za otróka.
'Parents care for their child.'
Skríli so se za zdóš.
'They hid behind the wall.'

Imám sinóve.
'I have sons.'
Imám účbenike.
'I have textbooks.'
Stárši skrbiýo za otróke.
'Parents care for their children.'
Skríli so se za zdóve.
'They hid behind the walls.'

There are some important exceptions to the 
above rule. Certain groups of nouns behave as 
animates, even though they are not. They include:
1. titles of newspapers referring to a person (Lövec)
2. brands of cars (fiat)
3. labels of wines (vipávec)
4. names of playing cards (áš, pík)
5. mushrooms (gobàn)
6. names of diseases (râk)
7. planets (Júpiter)
8. sports clubs referring to a person (Slován)
9. a misc. group of nouns including the words:
   (a) dûh 'soul'
   (b) words meaning 'dead person'/'corpse'/
       'cadaver' mrlieč, mrtváč, mrtvec

DOUBLE NEGATIVES

Slovene, like many other European languages, employs the rule of double negation. Thus, the presence of a pronoun or adverb in ni- requires that the verb be negated as well, i.e.:

Kdór nič ne tvéga, nič níma.

'Nothing ventured, nothing gained.'

['He who risks nothing has nothing.]

Nikömur nísem ničésar rékel.

'I did not say anything to anybody.'

Nikógar nísem vîdel.

'I didn't see anybody.'

Niko-li nikjér ga ne nájdeš.

'You can never find him anywhere.'

Téga nikár ne délaj!

'Be sure not to do that.'

SPECIAL USES OF THE GENITIVE CASE

In addition to the use of the genitive case with numerals above 5 (see p. 57), there are a number of other special constructions requiring the genitive. They are outlined below.

1. GENITIVE OF NEGATION

In the examples used above under double negatives we see the use of the genitive of negation in the words ničésar, nikógar and téga.
When transitive verbs which take a direct object in the accusative case are negated, the accusative case is normally replaced by the genitive case in all numbers:

Poznám hotel/hotél.
'I know the hotel/hotels.'
Ne poznám hotél/hotélov
'I don't know the hotel/hotels.'
Mírko imá knjígo/knjíge.
'Mirko has the book/books.'
Mírko níma knjíge/knjíg.
'Mirko doesn't have the book/books.'
Poglédal sem danášnjo póšto.
'I saw today's mail.'
Nísem poglédal danášnje póšte.
'I didn't see today's mail.'
Nísmo videli tvójega kolésa.
'We didn't see your bike.'
Nísmo videli váših koléš.
'We didn't see your bikes.'
Ne mórète telefonirati, če nímate žetónov.
'You can't call, if you don't have tokens.'

Note also the following pair of sentences. In the first one the subject occurs in the nominative case as expected. In the second one the subject is in the genitive case due to the presence of a negated form of the verb 'to be' (see also pp. 33-34, 121-122 for other similar examples):
Oče je domá.       'Father is home.'
Očeta ní domá.     'Father is not home.'

2. GENITIVE OF QUANTITY

The following words indicate quantity and require the use of the genitive:
málo 'little'/few', mnógo/velíko 'much'/'many',
as well as káj 'some'/'any', někaj 'some(thing)'
or 'several' and nič 'nothing', e.g.
málo/mnógo (velíko)/někaj híš
'a few/many/several houses'
málo/mnógo/někaj zanimívega
'little/much/something of interest'
Syntax

and

veliko sréče!  'lots of luck!'
málo prijateljev  '(a) few friends'
mnogo časa  'lots of time'
nékaj drobíža  'some change'
še kaj drúgega  'something else'
nič húdega  'nothing bad'

The word kóliko 'how much / many' also requires the use of the genitive case in that it refers to quantity:

Kóliko hotelov je v Ljubljáni?  'How many hotels are there in Ljubljana?'
Kóliko denárja imáte?  'How much money do you have?'

The genitive case may also be used if one wishes to express an idea of approximation with the word kak:

Kóliko hotelov?
  'How many hotels?'
Kákih pét / desét / dvájset.
  'Some five / ten / twenty.'

and

Kóliko je stára njegóva žéna?  'How old is his wife?'
Kákih pédédeset.
  'About fifty.'

Under the category of quantity we may also include the partitive genitive. If part of something, as opposed to the whole of it, is desired, then the genitive is used:

Dàj mi / vzê mi si čája / krúha / síra.
  'Give me / take (for yourself) some tea / bread / cheese.'

vs.

Dàj mi / vzêmi si čaj / krúh / sír.
  'Give me/take (for yourself) the tea / bread / cheese.'

3. EXCEPTIONAL USE OF ADJECTIVES AND PRONOUNS IN THE GENITIVE CASE

Note the following use of feminine nouns modified by adjectives and pronouns declined like adjectives in the accusative case in the sentences which follow:
Jaz imam svojo knjigo.
'I have my book.'
Vzemi se ti svojo.
'Take yours also.'
and
Katero slivovko hocete?
'Which plum brandy do you want?'
Slovensko.
'A Sloven one.'

In the case of phrases in which the adjective or pronoun modifies an omitted masculine or neuter noun, however, the adjective or pronoun appears in the genitive case rather than in the expected accusative case:
Jaz imam svoj kovcek.
'I have my suitcase.'
Vzemi se ti svojega.
'Take yours also.'
Kateri klobuk hocete?
'Which hat do you want?'
Tega ali onega?
'This one or that one?'
Katero vinom naj prinjsem?
'Which wine should I bring?'
Prinesite lanskega / rdecega.
'Bring last year's' / 'a red one.'

[See also example on p. 52.]

SOME SPECIAL MODAL VERBS AND EXPRESSIONS

There are special vocabulary items and/or syntactic rules for constructing sentences in Slovene with words which correspond to English 'can' / 'may', 'to be allowed', 'must', 'it is necessary' and 'prefer' / 'like'.

moci 'can' / 'may'

The verb moci in Slovene with its present tense moram, morek, etc. (see its conjugation on p. 80) has the meaning of 'to be (physically) able(to do something)' / 'to be capable' / 'can'. It is followed by an infinitive:
Morem samo pohvaliti...
'I can only praise....'
Dánés ne mórem délati.
'I cannot work today.'
Na izpítu se nikákor nísem mőgel zbráti.
'I couldn't concentrate at all at the exam.'
Stóril bom, kári bom nájveč mőgel.
'I'll do the best (most) that I can.'
When one wishes, however, to convey the meaning of 'can' in the sense of 'may' (permission granted) / 'might' in Slovene, the word lahkó (literally 'easily') plus a finite form of the verb is used:
Lahkó vstópim?
'Can/may I come in?'
Lahkó me pokličete, kádar kóli želíte.
'You can/may call me whenever you wish.'
Lahkó to bãreš?
'Can you read this?'
Lahkó, da je pozábíl.
'He might have forgotten.'
In the event of a negative reply, the word lahko is not used. The speaker reverts to the verb môči if there is some physical hindrance (for permission denied, see sméti below):
Ne môrete še vstopíti.
'You can't come in yet.' [Because, e.g. the floors are still wet.]
Téga ne móreš bráti.
'You can't read this.' [Because, e.g.: I'm reading it. / It's too difficult. / It's in a foreign language. See also example under sméti.]
Ne móreš takó govoriti s staréjšimi od sêbe.
'You can not speak to your elders like that.' [You did, and you are being reproached for having done so. See also final example under sméti.]

sméti 'to be allowed'

The verb sméti has the meaning 'to be allowed' or 'to be permitted, i.e. a more emphatic granting or denying of permission than in the 'can'/'may' constructions above:
Ali smém vprašáti...?
'Am I allowed to ask...?'
Ali smém telefonírati od vás?
'Am I allowed to use your telephone?'
Túkaj se ne smé kadíti.
'Smoking is forbidden here.'
Ona ne smé iz hiše.
'She's not allowed out.'
Ne sméš téga bráti.
'You are not allowed to read this.'
Ne sméš takó govoríti s staréjšimi od sèbe.
'You are not allowed (may not) to talk to your elders like that.' [A rule is stated without a strong reproach being issued.]

móraťi 'must' / 'should'

The verb móraťi means 'must' / 'should' / 'ought' / 'to have to'. [Note: Be careful not to confuse its present tense conjugation with that of môči!] Móraťi, like môči, belongs to a limited group of verbs which require an infinitive complement. The infinitive may be deleted (but it remains implied) with verbs of motion:

Mórať domóv/k zdravníku.
'You must / should / ought / have to go home / go see a doctor.'
Tó kníjígo mórate prebráti.
'You must read this book.'
Mórál je umrétí.
'He was doomed to die.'

tréba 'it is necessary'

A construction with the word tréba expresses the concept 'it is necessary'('needed') as in the following examples:

Tó je tréba storíti.
'IT is necessary to do this.'
Ní tréba délati.
'It's not necessary to work.'
Káj je še tréba?
'What else is needed?'
Ní mi tréba tvójega denárja.
'I don't need your money.'
imeti rad 'prefer' / 'like'

The adjective rad (see p. 39) and its comparative râjši/ráje (literally 'glad'/ 'more gladly') or the superlative with naj-combined with the verb imeti 'to have' in Slovene corresponds to the English meanings: 'to prefer', 'to like' ('to love' when speaking about a person), 'rather'/ 'sooner', 'to be willing'. When used with verbs other than imeti its use is adverbial and its meaning closer to the original 'gladly'. Note its use in the following sentences:

Rad imam lahka vina.
'I like light wines.'
Radim imajo šah.
'They like (to play) chess.'
Najrâjši/najrâje imam čaj.
'I'd much rather have tea.'
Péter zelâ nerađ odgovarja na pismo.
'Peter hates (really prefers not) to answer letters.'
Ali se râda učiš slovénščino?
'Do you like studying Slovene?'
Jâže bi râjši/râje ostâl v Ljubljani.
'Joe would prefer to stay in Ljubljana.'
Nina bi râje odpotovala, kot pa da bi družila z manjo.
'Nina would sooner leave than join me!'
Mî bi râje šlî pêš.
'We'd prefer to walk (go by foot).' 

VERBS OF MOTION AND CASE REQUIREMENTS

In Slovene there are many verbs which fall into a category known as verbs of motion. Such verbs suggest the movement of a person or object from one location to another. The prepositions which follow such verbs will require the noun to be in the accusative case, while the same prepositions used with verbs indicating a stationary position will be used with a case other than accusative. [Review prepositions on pp. 60-64.] There are also several paired adverbs which designate place as opposed to movement including:
Verbs of Motion  

<table>
<thead>
<tr>
<th>place</th>
<th>motion</th>
</tr>
</thead>
<tbody>
<tr>
<td>kjé</td>
<td>'where'</td>
</tr>
<tr>
<td>kám/kód</td>
<td>'where'</td>
</tr>
<tr>
<td>tükaj</td>
<td>'here'</td>
</tr>
<tr>
<td>sâm</td>
<td>'here'</td>
</tr>
<tr>
<td>tàm</td>
<td>'there'</td>
</tr>
<tr>
<td>tjà</td>
<td>'there'</td>
</tr>
</tbody>
</table>

Compare the following sentences:

Kjé si bíl?  
'Where were you?'
Bíl sem v Ljubljáni.  
'I was in Ljubljana.'
[The sentences above indicate a stationary location, not movement, and v takes the locative case.]

as opposed to

Kám gréš?  
'Where are you going?'
Grém v Ljubljáno.  
'I'm going to Ljubljana.'
[These sentences indicate movement/express direction to a place, and v takes the accusative case.]

likewise

Hédvia na délo.  
'We (two) go to work.'
Mídva sva bilá na délu.  
'We (two) were at work.'
Kdó je pádel v vódo?  
'Who fell into the water?'
Pomorščák je v vódi.  
'A sailor is in the water.'
Sédli smo pod drevó.  
'We sat down under the tree.'
Ležáli smo pod drevésom.  
'We were lying under the tree.'
Pelljé ga v mójó sóbo!  
'Take him into my room!'
Júrij létà sém in tjà.  
'Jurij is running (flying) here and there.'
Nési tó písmo na pósto!  
'Take this letter to the post office!'

Verbs of motion include such verbs as:

- bežáti  
  'to run'
- íti  
  'to go'
- hodíti  
  'to walk'
- gnáti  
  'to impel'
- létati/letéti  
  'to fly'
- nosíti/něsti  
  'to carry'
- plávati  
  'to swim'/'to sail'
Syntax

<table>

<td>'to sit down'</td>
</tr>
<tr>
<td>postáviti</td>
<td>'to place (standing)'</td>
</tr>
<tr>
<td>vréči</td>
<td>'to throw'</td>
</tr>
</tbody>
</table>

AND

Many of the verbs in the preceding list have prefixed and related forms derived from them which are part of the inventory of verbs of motion.
TIME EXPRESSIONS

Slovene, like any language, has its own special way of phrasing time expressions, dates and telling age. Age and time expressions employ cardinal numbers, while dates use ordinals (see pp. 54-55). They are summarized below.

1. TELLING AGE: The formula for designating age is a simple one:

\[ \text{Kóliko je stár Jóže/stára Nína?} \]
\[ \text{How old is Joe/Nina?} \]
\[ \text{Òn/Ona je stár/stára... 'He/She is...} \]
\[ \text{ëno léto 1} \]
\[ \text{dvé léti 2} \]
\[ \text{trí/štíri léta 3/4} \]
\[ \text{pét lét 5} \]
\[ \text{ënaindvájset léť 21} \]
\[ \text{dváintridéset lét 32} \]
\[ \text{pétinšéstdeset lét. 65 years old.'} \]

[Refer to pp. 56-57 for case requirements.]

In order to state approximation of age, one may use the following constructions:

\[ \text{Blíža se k pétdesetim.} \]
\[ \text{'He/she is approaching his/her fifties.'} \]
\[ \text{je v zgódnih/póznih trídesetih} \]
\[ \text{'in one's early/late thirties'} \]

2. TELLING TIME: There are often several ways to state the same time expression in Slovene. Compare the various possibilities offered below. The learner is also reminded that the 24 hour clock is used in most official areas of life, so that 14 hrs. is 2 p.m. and 20 hrs. is 8 p.m., etc. Further, in written Slovene a period(decimal point) is used to separate the hour and minute(s) rather than a colon as is done in English.

\[ \text{Kóliko je úra? 'What time is it?'} \]
\[ \text{Úra je... 'It is...'} \]
\[ \text{1:00 éna [nom.]} \]
\[ \text{2:00 dvé} \]
\[ \text{3:00 trí} \]
\[ \text{10:00 desét} \]
12:30 půl énih (or éne) [pol+gen.]
1:30 půl dvěh
2:30 půl tréh
9:30 půl desětih
12:15 četř na éno/éna [na+acc.]
1:15 četř na dvé
2:15 četř na trí
9:15 četř na desét
12:45 trí četř na éno/éna
1:45 trí četř na dvé
2:45 trí četř na trí
9:45 trí četř na desét

OR

1:15 Úra je éna in pétnajst (minút).
Úra je četř čez éno. [čez+acc.]
1:30 Úra je éna in trídeset (minút).
1:45 Úra je éna in pétníštírideset.
Čez pétnajst bo dvé.
Úra je pétnajst do dvéh. [do+gen.]

PLUS

1:01 Úra je éna minúta čez éno.
1:02 dvé minúti čez éno.
1:05 pét minút čez éno.

ALSO

1:07 Úra je éna in sédem minút.
1:40 dvajset minut do dvéh
2:55 čez pét minút bo trí.
2:57 čez trí minúte bo trí.
2:59 čez éno minúto bo trí.

OR

2:55 pét minut do tréh
3:57 do štířih mánjka (še) trí minúte
4:59 éna minúta do pét

Kdáj? 'When?' [ob + loc.]
Ob énih OR ob éni úri 'at 1:00'
Ob dvéh 'at 2:00'
Ob pétnajstih 'at 3:00 (p.m.)'
Ob půl desětih 'at 9:30'
Ob desětih in dvájset(minút) 'at 10:20'
3. EXPRESSING AMOUNTS OF TIME:

(a) In order to state that an event will take place in a certain period of time, the preposition čez with the accusative case of the number is used:

Jóže bo tůkaj čez ěno úro / pět úr / ěn mésec.
'Joe will be here in one / five hour(s) / a month.'

(b) In order to specify the duration of an action, the simple accusative is used, i.e. without a preposition. [Hint: If the preposition 'for' in English may be omitted, then no preposition is required in Slovene.]

Bóris je délal ěno úro / dvě úri / pět úr / vsó zímo.
'Boris was working (for) one / two / five hours / all winter.'

(c) In order to state the length of time in which an action can be accomplished, v plus the locative is used:

Tó bom narédil v ěni úri / dvěh / pětih úrah / v ěnem tédnu.
'I shall get that done in one / two / five hours / in a week.'

(d) In order to specify that an action is done with a certain frequency, the preposition na plus the accusative is used:

ěnkrať na léto / dvákrat na téden / tríkrat na minúto
'once a (per) year' / 'twice a week' / 'three times a minute'

(e) In order to express time 'before' ('by') which an event occurs, the preposition do followed by the genitive case is used:

Prišél bom k váma / Pri váju bóm do tréh.
'I'll get to / be at your place before (by) three.'

Likewise, the prepositions od....do, both followed by the genitive case, express the concept 'from.....to'.
Mesníca je odepřta od dvěh do sedmich.
'The butcher shop is open from two to seven.'

(f) In order to specify the length of time that a given action is intended to last or to be in effect, the preposition za is used followed by the accusative case:
Za kóliko dňí ste rezervírali sóbo?
'For how many days did you reserve the room?'
Za èin dán/dvá dní.
'For one/two days.'

4. DATES:

(a) Requesting and stating the current date may be done by the use of the nominative or genitive cases:
Katéria dátum/dán je dánas? 'What date is it?'
Dánas je devéti. [nom.] 'Today is the ninth.'
Devéti máj. [nom.] 'May 9th.'

   OR
Katéregia smo dánas?' 'What date is it?'
Dánas smo devétega.[gen.]'Today is the ninth.'
Devétega mája. [gen.] 'May 9th.'

(b) When stating the date on which an event takes place, the use of the genitive is obligatory:
Lahko príde te devétega?
'Can you come on the ninth?'
Prešeren je umrl ôsmega februarja.
'Prešeren died on February 8th.'

(c) Dates involving years are stated in the following way:
Smó tísoè devéstäo devédésétega. [gen.]
'It is 1990.'
Rôjen sem (rodil sem se) tísoè devéstäo pètëdéstega léta. [gen.]
'I was born in 1950.'

   OR
Rôjen sem léta [gen.] tísoè devéstäo pètinëstdeset.
'I was born in 1965.'

AND

'Rôjen sem trídesetega mája [gen.] lísoč
devétsto sedemdesetega.

'I was born on May 30, 1970.'

Prešeren se je rodil trétjega decembra
tísoč osemsto.

'Prešeren was born on December 3rd, 1800.'

5. NAMES OF THE DAYS OF THE WEEK:

Katéri dán je dános?

'What day (of the week) is it?'

Dános je ponedeljek. 'Today is Monday.'

törek Tuesday sréda Wednesday
četrtok Thursday pêtok Friday
sobota Saturday nedelja Sunday

In order to say 'on Monday, Tuesday, Wednesday', etc. the preposition v is used with the accusative case:

v ponedeljek, v törek, v srédo...

The plural, 'on Sundays, on Mondays', etc. is expressed by using the preposition ob with the locative case:

ob nedeljah, ob ponedeljkih...

6. NAMES OF THE MONTHS: The names of the months are given below. [Note: months may also be read by the use of the ordinal numerals in order 'first' through 'twelfth'. For example, in European style 2.VII.1701 is to be read as 7/2/1701 in American style. It may be read as drugega sedmega tisoč sedemsto prvega leta.]

júniar júlij
fébruár avgúst
márc márc
apríl septémber
máj októbér
júni júni
júni júni

All of the month names are masculine. In order to say 'in January', 'in March', etc., the preposition v is used with the locative case, e.g. v júniarju, v márcu. OR the genitive case may be used, e.g.

\[1 \frac{2}{3}(\text{)}\]
 Péruarja je pádlo velíko snegá.
'A lot of snow fell in February.'

7. DIVISIONS OF THE DAY:

'in the...'/'at'
'morning' jútro zjútra/dopóldne
('good morning' dőbro jútro)
'day' dán podnévi/čez dán
('good day' dőber dán)
'evening' večér zvečér
('good evening' dőber večér)
'night' nôč ponôč
('good night' láhko nôč) [note!]

note also:
'noon' póldan 'at noon' opóldne
'midnight' pólnoci 'at midnight' opólnoči
'a.m.' dopóldne 'p.m.' popóldne
'today' dänes
'yesterday' včeraj
'tomorrow' jútri
'this morning' dávi
'tonight' nocôj
'this evening' drévi

8. THE YEAR AND ITS SEASONS:

'in the...'
'year' léto
'this year' létos
'last year' láni
'next year' drúgo/prihôdnje léto
'month' mêséc
'this month' tá mêsec
'last month' préjšnji mêsec
'next month' drúgi/prihôdnji mêsec
'season' létni čás
'spring' pomlád spomládi
'summer' polétje poléti
'fall' jesën jesení
'winter' zíma pozími
WORD ORDER IN SLOVENE

Word order in Slovene is considered to be free. That "freedom", however, is only relative. The meaning which a speaker wishes to convey in a given situation determines the order in which words appear in a sentence. Additionally, word order is closely connected with the imparting of new information and with the overall stress/intonation of the sentence. Independent words, a term used here to include nouns, adjectives, adverbs, numerals and verbs, normally occupy a specific position within a sentence. Their position is rather rigidly defined to the extent that if their place in the sentence is changed, or if the intonation of the sentence is changed, the meaning which the speaker intends also changes. Thus, the position which any given word occupies within a sentence determines the effect which the speaker wishes to achieve. Dependent words, a term used to include prepositions, conjunctions, negatives, particles, short form pronouns (clitics) and forms of the verb biti 'to be' (auxiliaries) adhere to a much stricter word order. Explanations provided here are meant to serve only as a general guide to word order in Slovene. To cover all aspects of Slovene word order is beyond the scope of a work such as this, and the student of Slovene is urged to cultivate the habit of careful reading and analysis of new texts from the beginning.

The general principle governing word order in simple or compound declarative sentences (and in commands) is that information which is given or known (the theme) is considered the least significant and comes first. It is followed by new information (the rheme) and is considered to be of maximum significance and is stated in order of its importance. A sentence in Slovene may begin with a noun and its modifiers, if any, as subject. (Many begin with adverbs or prepositional phrases.) A personal pronoun, unless stressed, is normally omitted. Then follows a verb and its comple-
Syntax            Word Order

ments, adverbial or prepositional modifiers, or perhaps another noun or an adjective:

Nâš Mârjan je
'Our Marjan [subject] is [verb]
učitelj. a teacher.' [noun]
mlâd. young.' [adjective]
domá. home.' [adverb]

Grêgor je pîsal
'Gregor [subject] was writing [verb]
knjîgo a book.' [direct object]
îhni. to his wife.' [indir. obj.]
trî úre. for three hours.'
[accusative expression of time]

Let us examine the sentence Njegôv stári dîd grê létos v Améiriko na obîsk. 'His old grandfather is going to America on a visit this year.' It contains an adverb and two prepositional phrases at the end of the sentence in which the new information (rheme), i.e. that of maximum importance, of the sentence is contained. The subject is a given (theme) consisting of three words and is of least importance in their sentence. The fact that he has an old grandfather has apparently already been established as a topic of conversation. It is followed by the verb. The adverb létos comes after the verb followed by the prepositional phrases. The adverb and the two prepositional phrases could change places within the sentence, each time creating different results. Here na obîsk is the final phrase, suggesting that the sentence is in response to the question "For what reason is he going to America?" ('on a visit' - perhaps he has been there earlier on business). Had the adverb létos come at the end of the sentence, then the emphasis would have shifted to 'this summer' in response to an implied question "When will he visit America?". If the phrase v Améiriko had come at the end of the sentence, then the impact would be a response to the question "Where is he going?" ('to America' - as opposed to some other country).

In the sentence Nâšegâ mâckâ ţe trî dîni ni domôv. 'Our cat hasn't (come) home for three days now.' the noun phrase nâšegâ mâckâ is the
subject and appears in the genitive due to the negated verb ni. (See pp. 34 and 106 for similar examples.) The word že emphasizes the accusative time phrase trí dňí which follows, and finally the most i mportant piece of information domov tells where it is that the cat has not been.

The least / maximum rule will take precedence over a word order based on parts of speech as can be seen in the following two sentences each consisting of only two words (no pronoun is necessary, the information being supplied by the ending of the verb):

Môram bráti. 'I must read.'
('Must' is a given, or presumed, and the undertaking of reading as opposed to some other action, such as writing or singing, is new.)

Bráti môram. 'I must read.'
(You already know that there is reading to be done, and now it is time that it must be done, i.e. it cannot be delayed further.)

[HINT: The emphasis (stress) in English sentences such as the two above will often help to decide the word order in Slovene.]

The least / maximum principle for given vs. new information applies to compound sentences such as Dánes je hladný, zatô ostáneva domá. [= Dánes je hladný. Ostáneva domá.] 'It's cold today, therefore we're staying home.' There is no subject expressed in the first part of the sentence, and here the adverb dánes precedes the verb, which is followed by the word hladný. The clause which follows contains a finite verb form for the first person dual ('the two of us are staying') and an adverb. The new information of maximal significance is 'cold' in the independent clause and '(at) home' in the dependent clause.

The compound sentence Ráci mu, da je njegóva knjíga pri měni. 'Tell him that I have his book.' follows the normal word order. The first part contains an imperative verb and the dative case of the masculine pronoun on (who is to be told). The subject pronoun ti is absent, as noted above. It is clear from the verbal ending. In the clause which follows, the phrase
njegóva knjíga is the subject of the verb je (see below for placement of the clitic je), and the sentence concludes with a prepositional phrase (where the book is).

The following three sentences further illustrate the relationship between information of least and maximum significance and the question of word order:

1. Na nášem vřtu je vaše v cvětju.
2. Vaše je v cvětju na nášem vřtu.

In each case those elements or units which the speaker feels are not divisible are grouped together. The placing of the various elements tells us what the speaker considers to be information of least or maximum significance.

The sentences might be translated in the following way:

1. 'In our garden everything is in bloom.'
   (We don't have to wait for anything to bloom now.)
   WHERE? + WHAT? / HOW?

2. 'Everything is in bloom in our garden.'
   (Elsewhere not everything is out yet.)
   WHAT? / HOW? + WHERE?

3. 'Everything in our garden is in bloom.'
   (There is nothing that doesn't have a flower on it.)
   WHAT? / WHERE? + HOW?

Questions in Slovene are frequently introduced by interrogatives such as kjé 'where', kám 'where (to)', kdó 'who', káj 'what', kdáj 'when', zakáj 'why', kakó 'how', etc. or by prepositional phrases. They are usually followed by a verb, then its subject, if any, and finally by additional information as required by the question:

Kdáj gré ávtobus?
  'When does the bus leave?'
Kjé je telefónski imenik?
  'Where's the telephone book?'
Kám gréš jútri?
  'Where are you going tomorrow?'
Kdó je v híši?
  'Who is in the house?'
Káj je tó?
'What's that?'
Kjé si dóbil té knjíge?
'Where did you get those books?'
Kakó je tó môžno?
'How is that possible?'
Od kód prihájaš?
'Where are you coming from?'
S katérim vlákom se boš peljála?
'Which train will you take?'
Na katére naslóve naj pôšljem tó sporočilo?
'To which addresses should I send this information?'

In the absence of an interrogative pronoun, adverb or prepositional phrase as in the preceding questions, the word ali (unstressed) is used to introduce explicit questions to which the answer 'yes' or 'no' is required, even in an embedded question as seen in the last example immediately below:
Ali véš, kakó se imenuje tísta gôra?
'Do you know what the name of that mountain is?'
Ali je domá?
'Is he/she home?'
Ali govoríte slovánsko?
'Do you speak Slovene?'
Ni mi povédal, ali se res ločuje.
'He didn't tell me if they are really separating.'

The question word ali is frequently reduced to a shorter a or is omitted in conversation (but not in formal literary texts):
Imáte ávto?
'Do you have a car?'
A razúmete slovánsko?
'Do you understand Slovene?'
Je Ánica tó védela?
'Did Anica know this?'

In questions to which the answer is 'yes' or 'no' such as the preceding a special sentence rising intonation is used in speech. Further, the omission of the word ali implies the continuation of an ongoing conversation, i.e.
ali may be dropped at any point in a conversa-
tion once the general theme or subject matter
under discussion has already been established.
Example: Se je Rajko res poroci? 'Did Rajko
really get married?' Here it is apparent that
the topic of Rajko's marriage has already been
raised (also implied in the word res).
The presence of clitics, i.e. the short
forms of pronouns (see pp. 47-49) and
auxiliaries (forms of the verb biti 'to be' used
with the descriptive participle in -1 for the
past and future tenses, see p. 78-80), in a
sentence or clause is rigidly defined (although
not always so rigidly followed in conversation).
They must occupy the second position in declara-
tive sentences and questions, and they them-
selves follow an accepted order. The list below
provides a guide to the prescribed word order
for sentences which contain clitics and/or
auxiliaries:
1. introductory (head) word / constituent
   (a) The introductory word, normally stressed,
       may be an independent word (see p. 120)
       OR constituent such as a phrase or even
       an entire clause (see p. 127).
   (b) Alternatively the introductory word may
       be ali, the particle naj or a conjunction
       such as da, in or &e.
2. (a) forms of the present tense of the verb
       biti 'to be' used as past tense aux-
       iliaries, except for je:
       sen, si, sva, sta, smo, ste, so
       (b) the word bi (conditional particle)
3. the reflexive pronouns se and si
4. the dative enclitic pronouns: mi, ti, mu,
   ji, nama, vama, jima, nam, vam, jim
5. the accusative enclitic pronouns: me, te,
   ga, jo, naju, vaju, ju, nas, vas, jih
6. the genitive enclitic pronouns: me, te,
   ga, je, naju, vaju, ju, nas, vas, jih
7. (a) forms of the future tense of the verb
       biti 'to be' used as future tense aux-
       iliaries: bom, boj, bo, bova, bosta,
       bomo, boste, bodo
       OR
the 3rd person singular present tense of the verb bítí 'to be': je

NOTE: Students of Slovene with a knowledge of Serbo-Croatian should take note of the significant difference in clitic word order in the two languages. The pattern for Serbo-Croatian is the following:
1.) head word/constituent or the particle li
2.) auxiliaries of past, future or conditional (except for je)
3.) dative pronoun
4.) genitive/accusative pronoun
5.) reflexive pronoun
6.) auxiliary je.

Below are samples of several simple short sentences illustrating word order with clitics in Slovene. They may be checked against the rules established above. They will then be followed by a series of fuller sentences:

Dál sem mu. / Dál sem mu ga.
'I gave it to him.'

Dála mu je. / Dála mu ga je.
'She gave it to him.'

Prinésel sem ji. / Prinésel sem ji jo.
'I brought it to her.'

Prinésla mu je. / Prinésla mu jo je.
'She brought it to him.'

Ali si mu ga dál?
'Did you give it to him?'

Ali mi ga boš dál?
'Will you give it to me?'

Ali bi ti ga dál?
'Would she give it to you?'

Ali mu ga je dál?
'Did he give it to him?'

The descriptive participle in -l used to form the past and future tenses with forms of the verb bítí 'to be' is stressed and may appear as the introductory (head) word (see examples 8., 9., 10. below and notes which follow) or may follow the clitic(s) (examples 1., 2., 3., 4., 5., 7., 15.–19.) if another word acts as the introductory word and begins the sentence. Note
further that the negative particle ne normally stands before the verb which it negates, including before the future forms of biti and the conditional particle bi. In such cases it counts as part of the entire constituent (examples 11., 17., 18., 19.). In those rare instances when ne is separated from the verb it may act as the head word of a sentence as in: Ne se věč báti, ne věč úpati. 'Fear no more, hope no more.' Negated auxiliary verbs of the past tense require that they cease to act as clitics. They acquire stress and become full words in a sentence and precede the participle in -l (examples 12., 13., 14 and notes below).

Study the list of examples below and the notes which follow it. Each sentence begins with an independent word [noun, pronoun, verb, adverb (examples 1., 2., 3., 4., 5.) or the participle in -l (examples 8., 9., 10. and final notes)] / constituent (examples 6., 7. and notes below) or the word ali (examples 20., 21., 22.). Some sentences have clauses introduced by full words (examples 23., 24.) or by the conjunctions da and če (examples 25., 26., 27., 28., 29., 30.). The final notes return to sentences with negated auxiliaries, longer constituent phrases and sentences which appear to deviate from the rule concerning introductory words. Use the following simplified chart for reference:

INTRODUCTORY WORD/CONSTITUENT FOLLOWED BY:
1. PRESENT TENSE OF BITI (except je) or BI
   + SE/SI + DAT/ACC/GEN
   OR
2. SE/SI + DAT/ACC/GEN
   + FUTURE OF BITI or JE

Examples:
1. Vesłe je bilo zasedeno.
   'All the seats were taken.'
2. Jóxe mu je telefoníral.
   'Joe called him.'
3. Róke so se mu začele tréstí.
   'His hands began to shake.'
4. Poté nám se rozšiřili.
   'Then we went our separate ways.'
5. Obklíněl se je pojávil?
   'When did he show up?'
6. Koli koletálně je v Slovéniji?
   'How many airports are there in Slovenia?'
7. Vše tó ste vidíeli?
   'Did you see all of that?'
8. Smejáš se mi je.
   'He was laughing at me.'
9. Smejáš sem se mu.
   'I was laughing at him.'
10. Kupila mi je kníjgo.
    'She bought me a book.'
11. Ne vidim ga.
    'I don't see him.'
12. Dušan ga ni videl.
    'Dušan didn't see him.'
    'I didn't see her.'
    'The plan did not succeed.'
15. Jóže bo telefoníral.
    'Joe will call'.
16. On se vam bo smejáš.
    'He'll be laughing at you.'
17. Dušan ga ne bo videl.
    'Dušan won't see him.'
18. Jaz je ne bom videl.
    'I won't be seeing her.'
19. Takó ne bo slò.
    'This won't do.'
20. Ali naj se mu opravíčím?
    'Should I apologize to him?'
21. Ali mi lahko povéste...?
    'Can you tell me...?'
22. Ali si boj zapomnil vše tó?
    'Will you keep all that in mind?'
23. Ne vém, kdo bi lahko svetoval bolje.
    'I don't know who could give better advice.'
24. Vše mu je dál, kář je imél.
    'He gave him everything that he had.'
25. Míslim, da se je bál psà.
  'I think that he was afraid of the dog.'
  'I hope that I shall see him.'
27. Oprostîte, da vas še ânkrat nadlégujem.
  'Forgive me for bothering you again.'
  'I think that the hotel is old.'
29. Olga ni domá, če se ne motím.
  'Olga is not at home, if I'm not wrong.'
30. Odšél bi, če bi šlù po môjem.
  'I'd leave if it were up to me.'

NOTE: In the following sentences the negated particle or auxiliary appears as the first element:
Ne bi me vîdela.  'She wouldn't see me.'
(compare: Vîdela bi me. 'She would see me.')
Nísem je vîdel.  'I didn't see her.'
(compare: Vîdel sem jo.    'I did see her.')
Ni se nam posrèèilo, da bi ga vîdeli.
  'We did not succeed in seeing him.'

NOTE: Entire phrases, clauses, or questions may fill the role of the first constituent of a sentence, e.g.
S tó stvarjó sem se mnógo bávil.
  'I've given a lot of thought to it.'
  [= I have occupied myself with that thing a lot.]
«Lètos sem bilà v Ljubljâni», je rèkla.
  '"I was in Ljubljana this summer," she said.'
«Káj se je zgodîlo?» so vprašáli.
  '"What happened?" they asked.'
«Prídem zjùtraj, če bom mógel», je rèkel.
  '"I'll come tomorrow if I can," he said.'

NOTE: Despite the rules established above, the following two responses to the questions posed begin with a clitic. That is because they are part of an ongoing conversation. They follow the rules established above for the use of the question word ali (pp. 124-125), and the pronoun is implied:
Kjé je Jánèz?
  'Where is Janez?'
Jè še prišèl!
  'He's already arrived!'
Ali si môj prijátelj? 'Are you my friend?'
Sém in ostánem. 'I am and shall so remain.'

NOTE: In the following sentences the presence of the clitics before the verb is possible because each sentence has been shortened by deleting the initial word. They are uttered with a single stress:

[Ali] Si ga vídel? 'Have you seen him?'
[To] Se mi je smejál. 'He was laughing at me.'
[Compare the preceding sentence with the "correct" version, example 8., in the list of sentences above.]

NOTE: Likewise the participle in -l often precedes the auxiliary in declarative sentences:

Dál sem mu ga. 'I gave it to him.'
Bíl sem v Slovéniji. 'I was in Slovenia.'

The above sentences follow the rule of information of least and maximum significance. One could change the emphasis in the second one from 'in Slovenia' to 'was' by saying:

V Slovéniji sem bíl.

[HINT: Try reading aloud the English sentence, first stressing 'was' and then 'Slovenia':

I wás in Slovénia.
The first variant in English equals the sentence above. The second equals the Slovene sentence ending with the words v Slovéniji.]

In interrogatives, however, the auxiliary precedes the participle in -l form (see above):

Si bilà v Slovéniji? 'Were you in Slovenia?'
Ne, nísem bilà. 'No, I wasn't.'
(The word ali is missing / implied in the question.)
SOME HINTS ON ENRICHING YOUR VOCABULARY

One of the most difficult problems in learning a new language is the acquisition of vocabulary. For the speaker of English the memorization and activation of new words in a Slavic language such as Slovene is no exception. They appear exotic and remote at the beginning. The following comments provide a few hints on how to recognize seemingly new words thereby expanding one's existing vocabulary.

At the beginning stages of his or her study of Slovene the learner is particularly advised to take note of word roots, prefixes and suffixes. On p. 92 it was shown how a basic verb may change meanings, sometimes radically, by the addition of a prefix. Learning to make informed guesses as to the meaning of a prefixed or suffixed word will help to increase one's vocabulary more quickly, and each newly encountered word will not need to be checked in a dictionary as a totally unknown item. Nouns, like verbs, may also add a prefix and acquire a new meaning, for example the following nouns of which contain the root -hod (cf. hoditi 'to walk'):

- dohod 'access'
- izhod 'exit'
- obhod 'rounds' ('to make one's...')
- odhod 'departure'
- prihod 'arrival'
- razhod 'parting'
- shod 'meeting'/'assembly'
- vhod 'entrance'
- zahod 'west'/'sundown'

Similarly, Slovene is rich in suffixes. Acquiring a working knowledge of them will help to expand one's vocabulary. For example, the word brat 'brother' is presented below with a number of different suffixes added to it:

- brátec 'little brother'
- brátranec 'cousin'
- brátenje 'fraternizing'
- brátov 'brother's'
- brátovski 'brotherly'
brátski 'fraternal'
bráštvo 'brotherhood'
brátovščina 'fellowship'

and compounds such as:
bratomor 'fratricide'
bratomóren 'fratricidal'

The word knjíga 'book' has many derivative forms:

knjigárna 'bookshop'
knjížen/knjížéven 'literary'
književnost 'literature'
književnik 'author'
knjižévnička '(female) author'
knjižnica 'library'
knjižničar 'librarian'
knjižničarstvo 'librarianship'

and compounds such as:

knjigotěštvo 'bookselling'
knjigotěžec 'bookseller'
knjigočestvo 'bookbinding'
knjigověž 'bookbinder'
knjigověznica 'book bindery'
knjigovědja 'accountant'
knjigovědstvo 'bookkeeping'

In the preceding lists of words many of the suffixes most frequently found in Slovene appeared, e.g. -stvo, -(n)ost, -ščina, which are used to form nouns of a more abstract nature from adjectives and other nouns (compare them to English nouns with the suffixes -ness, -hood, -kind, -ity and -ship). Additional words:

bogástvo < bogáť 'rich' = 'wealth'
člověšť < člověk 'rich' = 'mankind'
točnost < točen 'precise' = 'preciseness'
dvoumlnost < dvá'two'+úm 'sense'='ambiguity'
sosěščina < sósed 'neighbor'='neighborhood'
miloščina < mil 'gentle' = 'charity'

The suffix -ina implies a grouping of some sort as in the word skupina 'group' (cf. the adverb skúpaj 'together'). Less common are the abstract suffixes -ota and -oba as in toplošta 'warmth' from topel 'warm' and zlóba 'malice' from zló 'evil'.
Adjectives formed by the addition of the suffixes -ski, as well as -ov/-ev and -ovski to nouns ending in a consonant also appeared. To the preceding list the suffix -in, used to derive adjectives from nouns ending in -a, such as sêstra 'sister': sêstrin 'sister's', may be added. The suffixes -ov and -in are used with masculine and feminine nouns (including proper names) respectively to form possessives (see also note 2. (b) on p. 38). The suffix -čji often fills the same role for animals: máčji 'cat's' < máčka 'cat'. The suffix -en is used frequently to derive adjectives from nouns, e.g. glásben 'musical' < glásba 'music', and the suffix -nji may often create an adjective from an adverb such as sedánji 'present'/'current' < sedáj 'now'.

Professions and roles which people occupy in life are designated, among others, by the suffixes -ec, -nik, -telj, and -tor. Feminine nouns may be formed from them by the addition of the suffixes -ka, -ica and -nica:

gréš + nik/nica 'male/female sinner'
diéktor/ica 'male/female director'
prijá + telj/teljica 'male/female friend'
Slovén + ec/ka 'male/female Slovene'

Among Slovene suffixes are a number which serve to create diminutives from other nouns. The most common include -ca, -ica and -ka from nouns belonging to feminine declensions, -ec, -ek and -ič for masculine declension nouns and -ece for neuter declension nouns:

róža/róžica 'rose'/'small rose'
tětá/tětka 'aunt'/'auntie'
Ána/Ánica 'Ann'/'Annie'
stvár/stvárca 'thing'/'little thing'
fánt/fántek/fantč 'boy'/'little boy'
vít/vitéc 'garden'/'little garden'
mésto/méstece 'town'/'small town'

Slovene shares two cognate international suffixes with English, i.e. -ist, as in slavist 'Slavist' and -izem (note spelling) as in liberalizem 'liberalism'.

133
Two additional suffixes which designate a place or locale where actions take place merit special attention. The first of these is -arna, as in the word knjigárna above. The other one is -išče as in gledališče 'theater' (the place where one goes 'to watch'/'to look' glédati).

Also commonly used and easy to recognize are verbal nouns (gerunds). Although they belong to the category of verbs, they are fully declined like Class I neuter nouns. They are formed from the past passive participle by the addition of the suffix -je to the -n or -t. (Refer to the formation of past passive adjectival participles on pp. 87-89, including the rules applicable to consonant alternations):

čistiti 'to clean' ~ čiščenje 'cleansing'
díhati 'to breathe' ~ díhanje 'breathing'
gorëti 'to burn' ~ gorënje 'burning'
govoriti 'to talk' ~ govorjënje 'talking'
hraniti 'to feed' ~ hránjenje 'feeding'
potovati 'to travel' ~ potovanje 'travelling'
späti 'to sleep' ~ spánje 'sleep'
vprášati 'to ask' ~ vprašanje 'question'
bíti 'to beat' ~ bítje 'beating'
gréti 'to warm' ~ grétje 'heating'
péti 'to sing' ~ péttje 'singing'

In the final group below all of the words contain the root del-. This root carries the basic meaning of 'work'. As one gains greater fluency in Slovene, it will become easier to make intelligent guesses as to the meaning of words, once having acquired a basic inventory of roots / base words.

délo 'work'
délati 'to work'
délavec 'worker'
délaven 'busy'('at work')/'industrious'
délavka 'working woman'
délavnica 'workroom'
délavnik 'work day'
délavnost 'diligence'
délavski 'workers'
délavstvo 'working class'
delazmóžen 'able to work'
delodajálec 'employer' ('giver of work')
delojemálec 'employee' ('one who accepts work')
delokróg  'sphere (circle) of action'
delomízen 'lazy' ('unwilling to work')
delopúst 'time off from work' (closing time before holidays/weekends)
delovánje 'working', 'activity'
delováti  'to be in operation'
déloven  'working' (as in work day)
delovódja 'foreman' ('work leader')
GRAMMATICAL TERMINOLOGY

The following is a list in English and Slovene of grammatical terms used in this reference grammar.

alphabet  abecéda  
sound  glás  
vowel  samoglásnik  
length  dolžina  
long  dolg  
short  krátek  
stress  poudárek  
stressed  poudárjen  
accent  naglás  
open  odpíť (širôk)  
closed  zapíť (ôzek)  
consonant  soglásnik  
voiced  zvenêč  
voiceless  nezvenêč  
change  spremémba  
alternation  
        due to  mehôánje  
syllable  zlôg

GENERAL GRAMMATICAL TERMINOLOGY

gender  spôl  
masculine  môški  
neuter  srédnji  
feminine  žénski  
root  korén  
stem  osnôva  
form  oblîka  
ending  obrazílo  
        zero ending  nûlto obrazílo  
declexion  sklanjátev  
case  sklôn  
nominate  imenoválnik  
accusative  tožílnik  
genitive  rodílnik  
dative  dajálnik  
locative  mûstnik  
instrumental  orôdnik  
number  števîlo

WORD INDEX

The index which follows includes words used throughout the text to illustrate grammatical and lexical points, including those used in sample declensions and conjugations. Words discussed in notes which constitute exceptional forms are likewise included. Individual vocabulary items used in sentences have not been included except for those introduced to emphasize a grammatical point. Finally, for the most part those words which are presented in list form throughout the text have been excluded from the word index, and the reader should refer to them separately. They include items such as: voiced and voiceless consonants (pp. 19-20); consonant alternations (pp. 20-21); comparative forms of adjectives (pp. 40-43); comparative forms of adverbs (p. 44); pronouns (pp. 47-53); cardinal and ordinal numerals (pp. 54-55); prepositions (pp. 60-64); imperative verbs (pp. 80-82); the several participles (pp. 84-89); verbal prefixes and prefixed verbs (pp. 91-92); pairs of imperfective and perfective verbs (pp. 92-93); verbs with the reflexive pronouns se/si (pp. 96-98); verbal stress (pp. 99-101); use of the dual (pp. 102-103); verbs of motion (p. 111); telling time (pp. 114-115); names of the days of the week, months, divisions of the day and seasons (pp. 118-119); word formation (pp. 131-135); grammatical terminology in English and Slovene (pp. 136-138).

zero ending 25
BIBLIOGRAPHY

The books listed below under Works Consulted have been extremely useful in writing this work, in particular those by Bajec et al., Kopčavar, Lencek and Toporišič. They provided critical information on grammatical forms as well as examples of usage. Likewise, the Grad dictionaries proved invaluable. Many of the examples used throughout the text were borrowed from the preceding works.
